18
19 The Order of Determination and exceptions thereto, on file herein,
20 having come on regularly for hearing before the above-entitled court on the
21 31st day of May, 1950, pursuant to the order of said court dated April 3, 1950;
22 evidence having been introduced, the matter argued and submitted for decision,
23 the court, upon motion duly made, having ordered an extension of time to
24 December 1, 1951, within which appropriation and application of the water to
25 beneficial use must be completed by Charles H. Bryson, Sr., and Estate of
26 Kathren Bryson, deceased, as defined in Paragraph 44 of the Order of Deter-
27 mination; requests for substitutions having been received from various persons
28 as successors in interest to certain parties to this proceeding; no motion
29 having been made by or on behalf of Solomon Karl and Haskell Karl for an ex-
30 tension of the time within which appropriation and application of water to
31 beneficial use must be completed as defined in Paragraph 31 of said Order of

1 Determination, and no proof of completion of the appropriation and application
2 of water to beneficial use defined in said Paragraph 31 having been offered;
3 being fully advised in the premises and good cause appearing therefor, the
4 court finds:

5 1. The corrections, listed in the document entitled
6 "Corrections to Order of Determination" dated May 31, 1950,
7 submitted by the Department of Public Works, Division of
8 Water Resources, acting through the State Engineer and on
9 file herein, should be made to correct errors appearing in
10 the Order of Determination on file herein.

11 2. The rights of Dora Johnson, J. C. Taresch and the
12 United States of America, in trust for the heirs of Orbey
13 Charley, in and to the use of water from Foreman Spring are
14 the subject of negotiations between the said parties which
15 are pending and undetermined.

16 3. The place of use of the water for which a right is
17 determined in the said Order of Determination for the Depart-
18 ment of Veterans Affairs, Edward D. Riehl and Helen H. Riehl
19 should be described as follows:

20	13.9 acres in $W\frac{1}{2}$ of Lot 2 of Section 6, T 25 N, R 12 E, M.D.B. & M.

NO. 4185
DECREE

...oOo...

The above entitled cause having come on regularly for hearing, trial and determination on the 31st day of May, 1950, before this Court sitting without a jury; Mark C. Nosler appearing as attorney for the Department of Public Works of the State of California, Division of Water Resources, acting through the State Engineer, hereinafter referred to as "Department"; Emmet J. Seawell, Assistant United States Attorney, Northern District of California, appearing specially for the United States of America; R. L. Tscherner, appearing as attorney for Department of Veterans Affairs and Edward D. Riehl and Helen H. Riehl; William M. Macmillan, appearing as attorney for H. C. Neer, F. C. Neer and Eva Neer; S. C. Young, appearing as attorney for Lloyd E. Hardgrave and John A. Hardgrave; and John W. Scott appearing for the California-Engels Mining Company; all parties in interest in said proceeding having been duly and regularly notified of said hearing, trial and determination; exceptions to the Order of Determination on file herein having been filed for and in behalf of Department of Veterans Affairs and Edward D. Riehl and Helen H. Riehl; Lloyd E. Hardgrave

1 and John A. Hardgrave; California-Engels Mining Company; and J. LaRue Robinson and
2 Elizabeth Evans Robinson; evidence having been introduced, the matter argued
3 and submitted for decision; and the Court being fully advised in the premises
4 and having entered an order on December 19 , 1950 affirming said Order of
5 Determination as corrected and amended; NOW THEREFORE, the Court renders this
6 its decree determining the rights of all persons involved in said proceeding
7 as follows, to wit:

8 IT IS HEREBY ORDERED, ADJUDGED AND DECREED as follows:

9 1. All of the rights hereinafter set forth are subject to all
10 definitions, limitations and provisions hereinafter set forth under the heading
11 "GENERAL DEFINITIONS, LIMITATIONS AND PROVISIONS".

12 2. The following claimants are corporations organized and existing
13 under and by virtue of the laws of the State of California and their offices
14 and places of business are set forth after their respective names as follows,
15 to wit: Almanor Lumber Co., Greenville, California; California-Engels Mining
16 Company, San Francisco, California; Forest Lodge Resort, Berkeley, California;
17 Dawn Institute of Science and Art, Indian Falls, Keddie, California; Setzer

19 California; and said claimants are hereinafter designated by their respective
20 corporate names as above set forth.

21 3. The Clover Valley Lumber Company is a corporation organized and
22 existing under and by virtue of the laws of the State of Nevada, authorized
23 to do business in the State of California, and its office and place of business
24 is Loyalton, California, and said claimant is hereinafter referred to by said
25 corporate name.

26 4. The Wolf Creek Timber Company, Inc., is a corporation organized
27 and existing under and by virtue of the laws of the State of New York, author-
28 ized to do business in the State of California, and its office and place of
29 business is San Francisco, California, and said claimant is hereinafter re-
30 ferred to by said corporate name.

31

HISTORY OF THE PROCEEDING

1
2 5. This proceeding was initiated, pursuant to Division 2, Part 3,
3 Chapter 3 of the Water Code, by petition of F. H. Dill, D. R. Strong, J. E.
4 Cardoza, W. A. Snyder and Arthur Peter. Said petition, duly filed with the
5 Department on August 22, 1944, requested a determination of the rights of the
6 various claimants in and to the use of the water of Indian Creek stream system
7 in Plumas County, California.

8 6. Upon investigation the Department found the facts and conditions
9 to be such that the public interest and necessity would be served by the deter-
10 mination petitioned for. On October 1, 1944, by order duly given and made, the
11 Department granted said petition, and thereafter duly gave notice by publication
12 setting forth the entry of the aforesaid order and of the pendency of this pro-
13 ceeding, specifying the date upon which the Department would begin its examina-
14 tion of said stream system, to wit: March 1, 1945, and prescribing and requiring
15 all claimants to rights in and to the use of the water of said Indian Creek
16 stream system to make proof of their claims.

17 7. At the time set in said notice the Department began its investi-
18 gation of the flow of Indian Creek stream system, and of the conduits diverting
19 water, and of the lands irrigated or irrigable therefrom, and proceeded to
20 gather all other data and information essential to the proper determination of
21 the rights in and to the use of the water therefrom, and thereafter the Depart-
22 ment reduced its observations, data, information and measurements to writing
23 and executed surveys and prepared maps from the observations of such surveys in
24 accordance with uniform rules and regulations duly and regularly adopted by the
25 Department, which surveys and maps show with substantial accuracy the course of
26 the streams involved in said proceeding, the location of each conduit diverting
27 water therefrom, the land irrigated and capable of being irrigated by each
29 conduit, and the kind of culture upon said irrigated lands. Said maps were
30 prepared by the Department as the surveys and observations progressed, and when
31 completed were duly and regularly filed and made of record in the office of the

1 Department.

2 8. Upon the completion of the aforesaid measurements and maps and
3 after filing of said observations, data, information and measurements, as
4 aforesaid, the Department, by order duly given and made, gave notice by publica-
5 tion thereof setting forth the date prior to which proofs, to be furnished by
6 claimants, in and to the use of the water involved in said proceeding, were
7 required to be filed with the Department, and the Department gave like notice
8 and enclosed therewith blank forms of proofs by registered mail, with postage
9 fully prepaid thereon, to each claimant to rights in and to the use of the
10 water involved in this proceeding, insofar as such claimant could be reasonably
11 ascertained at his last known place of address. Thereafter the time allowed
12 within which proofs of claims might be filed was extended, by order duly given
13 and made by the Department, to and including December 1, 1946, and within said
14 period as so extended claimants herein duly filed with the Department one hundred
15 thirty-three proofs of their respective rights in and to the use of the water
16 involved in said proceeding.

17 9. After the filing of proofs by claimants as aforesaid, and after
18 the expiration of the time fixed by the Department for the filing of said
19 proofs, the Department duly assembled all proofs which had been filed and pre-
20 pared and duly certified an abstract of all said proofs, entitled "Abstract of
21 Proofs of Claims, February, 1947", and thereafter by order duly given and made,
22 prepared a notice fixing and setting a time and place convenient to the claimants
23 when and where evidence taken by or filed with the Department would be open to
24 inspection for a period of not less than ten days; and a copy of said notice
25 together with a copy of said abstract of proofs, was thereafter, and more than
26 fifteen days prior to the first day prescribed in said order as the commencement
27 of the period of such inspection, duly mailed by registered mail, with the
28 postage fully prepaid thereon, to each claimant who had appeared and filed
29 proofs, and thereafter and in accordance with said notice all of the evidence
30 taken by or filed with the Department was open for inspection at the times and
31 in the place and for the period designated in said notice, and any and all persons

1 during said period were permitted to inspect such evidence and proofs, and
2 during all of said period of inspection, a representative of the Department was
3 present.

4 10. Twelve notices of contests of proofs were filed with the Depart-
5 ment within fifteen days after expiration of the period during which said
6 evidence and proofs were opened to public inspection or within the time as
7 finally extended by orders duly given and made by said Department to and includ-
8 ing August 21, 1947; within ten days after the receipt of the notices of each
9 of said contests, the Department notified by registered mail the contestants
10 and the claimants respectively involved in each of said contests of the respec-
11 tive time and place fixed for hearing the matter of said contest, each of said
12 times being fixed not less than fifteen nor more than sixty days from the
13 respective time the Department mailed said notice of hearing; thereafter the
14 Department gave notice of proposed adjournment of hearing on contests to all
15 claimants and duly adjourned hearing on said contests until October 21 and 22,
16 1947, and gave notice of said adjournment to all claimants; and the Department
17 duly held hearings of contests at the respective times and places fixed by said
18 notice of said adjournment, and caused a transcript of all testimony taken at
19 each of the hearings to be filed with the Department.

20 11. Howard Bass, Warren Bass, Dudley Bass, and Claude Bass, deceased;
21 Charles H. Bryson, Sr. and Estate of Kathren Bryson, deceased; Ed Cooper, J. A.
22 Ritchy and W. E. Cooper; K. R. Doyle and Murray Doyle; Claude B. Harwood and
23 La Viena Harwood; H. C. Neer and F. C. Neer; Hattie Potts and Elbert R. Spraker
24 and Roy E. Harwood neglected to make proof of their claims of water rights in-
25 involved in this proceeding within the time allowed for filing such proofs.
26 Clover Valley Lumber Company and California-Engels Mining Company failed to
27 make proof of all of their claims of water rights involved in this proceeding
28 within the time allowed for filing such proofs. The Department determined here-
29 in the rights of said parties on such evidence as it has obtained and has on file
30 in this proceeding in the way of maps, plats, surveys, transcripts and other
31 data essential to a determination of the water rights involved.

1 12. Said Department duly made, on January 19, 1950, its order
2 determining and establishing the several rights to the water of Indian Creek
3 stream system, in Plumas County, California, which said order was entered of
4 record on said date in the office of said Department in Book 2, Orders of
5 Determination, at page 121, which said order was duly certified by said Depart-
6 ment. Thereafter said Department caused said Order of Determination so certified
7 to be printed and a copy thereof to be sent by registered mail, with postage
8 fully prepaid thereon, to each person who filed proof of claim, directed to the
9 last known address.

10 13. At the time of submission of said proofs, said Department
11 collected the fees due thereon, and after the time of mailing its Order of
12 Determination as aforesaid, computed the entire expense incurred in performing
13 the duties prescribed, in this proceeding, including salaries, wages, traveling
14 expenses, and all costs of whatever character properly chargeable to the pro-
15 ceeding, and duly made an equitable apportionment against the parties, of said
16 expense in excess of the total amount received by the Department from claimants
17 with their submission of said proofs, and duly served, on April 6, 1950, a
18 notice of statement and apportionment of said expense, by registered mail with
19 the postage fully prepaid thereon, on each of the parties to this proceeding.
20 No objections having been filed by any party to this proceeding to said statement
21 and apportionment of expense within the period prescribed; said statement and
22 apportionment of expense was duly approved by the Court on May 31, 1950; and
23 said Court duly ordered that all apportionments of expense remaining unpaid at
24 the time of entry of decree should be included therein.

25 14. After entry of the Order of Determination as aforesaid, and on
26 April 3, 1950, a certified copy thereof, together with the original evidence
27 and transcript of testimony filed with or taken before the Department, all duly
28 certified by said Department, was filed with the Clerk of the Superior Court
29 of the State of California in and for the County of Plumas. Upon the filing
30 of said certified copy of said order, evidence and transcript with the Clerk of
31 said Court, and on April 3, 1950, the Department procured an order from said

1 Court setting May 31, 1950, at ten o'clock in the morning of said day in the
2 courtroom of said Court in the City of Quincy in said county and state, as the
3 time and place for hearing on said Order of Determination. The Department
4 thereupon procured from the Clerk of said Court a certified copy of said order
5 of said Court setting the time and place for hearing as aforesaid, and forth-
6 with the Department mailed a copy of such certified copy of said order by
7 registered mail, with postage fully prepaid thereon, addressed to each known
8 party in interest at his last known address, and duly caused said certified copy
9 of said order to be published, and duly filed with the Clerk of said Court proof
10 of such service by registered mail and publication.

DESCRIPTION OF AREA INVOLVED

13 15. Indian Creek has its source in the several tributary streams
14 which rise in the plateau area on the west slope of the main divide of the
15 Sierra Nevada in the northeasterly portion of Plumas County and is tributary
16 to the Feather River stream system. The main stream is formed by the junction
17 of Indian Creek, Last Chance Creek and Red Clover Creek at the head of Genesee
18 Valley. It flows westerly through Genesee Valley to Taylorsville at the head
19 of Indian Valley, thence in northwesterly - southwesterly circuitous course
20 past Crescent Mills and thence southwesterly to its confluence with Spanish
21 Creek and the East Branch of North Fork of Feather River, near Keddie, California
22 Ward Creek and Little Grizzly Creek from the south and Hosselkus Creek from the
23 north are tributary in Genesee Valley. Lights Creek and Wolf Creek from the
24 north enter the main stream in Indian Valley.

25 16. Indian Creek has a tributary area of about 753 square miles
26 above its junction with Spanish Creek and the East Branch of North Fork of
27 Feather River. The altitudes within this area range from about 3,500 feet on
28 the floor of Indian Valley to about 8,000 feet at the headwaters of the stream
29 system. Approximately 40,000 acres of land within the basin are relatively
30 level in contour of which 16,000 acres lie in the lower valleys and the re-
31 mainder in the higher mountain or table land area. Although the greater part

1 of the relatively level area may be classified as agricultural only about
2 11,800 acres are irrigated at the present time. Of the irrigated area, about
3 9,700 acres are in Genesee and Indian Valleys.

4 17. The climate of the area involved in said proceeding is typical
5 of that prevailing generally over mountain valley areas in northeastern
6 California. Scarcity of rainfall, wide range of temperature, low humidity and
7 rapid evaporation during the growing season are the characteristic features
8 of the weather. The mean seasonal precipitation as measured at Greenville, in
9 said Plumas County, is approximately 43.3 inches, of which about 90 per cent
10 occurs during the period from October first to April thirtieth. That portion
11 of the winter precipitation occurring in December, January, February and March
12 is largely in the form of snow with rain predominating during the fall and
13 spring seasons. The summer precipitation usually occurs as thunder showers
14 which are irregular in occurrence and cannot be depended upon for crop growth.
15 Records of temperature at Greenville show that the monthly mean minimum temper-
16 atures range from 40.2 degrees in August to 21.9 degrees in December and
17 normally are below freezing during the months from October to April. The
18 monthly mean maximum temperatures during the summer months from May through
19 September range from 70.0 degrees to 88.1 degrees. The average monthly mean
20 temperature for this period approximates 60.0 degrees. The highest recorded
21 temperature at Greenville was 105 degrees and the lowest was minus 14 degrees,
22 a range of 119 degrees. The length of growing season in Indian and Genesee
23 Valleys is about 142 days, extending from about May first to September twentieth.
24 In the higher plateau area the season is shorter and killing frosts for tender
25 leaf vegetation may occur any time during the year.

26 18. The soils of the irrigated lands involved in the proceeding, range
27 from sandy and gravelly clay loams to sandy loams with the sandy loams predom-
28 inating. The soils are generally deep with good drainage and well adapted
29 to the crops grown.

30 19. Agriculture on a commercial basis is limited by the climate of
31 the region to the growing of forage crops and grains. In Indian and Genesee

1 Valleys, grain, clover and meadow crops are rotated over a period of years on
2 a large portion of the agricultural area. Those portions of the valleys not
3 suited to such rotation are generally maintained in meadow crops. The basins
4 of the upper tributary area are entirely cropped to native meadow grasses.

5 20. The successful production of said basic crops is dependent upon
6 irrigation, and since the water supply of Indian Creek stream system is in-
7 adequate for all agricultural needs throughout each irrigation season, it is
8 essential that the rights in and to the use of water of said stream system be
9 determined in order that there may be an orderly distribution thereof, to the
10 lawful owners.

11
12 GENERAL DEFINITIONS, LIMITATIONS AND PROVISIONS

13 21. The term "proceeding" when used herein means "in the matter of
14 the determination of the rights of the various claimants to the water of
15 Indian Creek stream system in Plumas County, California"; the term "stream
16 system" when used herein means Indian Creek and all its tributaries above its
17 junction with the East Branch of North Fork of Feather River; the term
18 "claimant" when used herein means a party claiming rights in and to the use of
19 water of Indian Creek stream system.

20 22. Although all quantities of water hereinafter allotted to the
21 several claimants for direct application to beneficial use are severally ex-
22 pressed in terms of continuous flow, nevertheless, nothing herein contained
23 shall be construed as limiting or restricting the rights of any such claimants
24 to rotate in the use of water, or the right of any such claimant to divert for
25 limited periods of time convenient "irrigation heads", and thus apply water to
26 his lands at a greater rate than indicated by the quantity of continuous flow
27 so allotted; provided, that such practice of rotation or use of "irrigation
28 heads" shall not result in the use by any such claimant of a total quan-
29 of water during any thirty-day period in excess of the equivalent of such
30 claimant's continuous flow allowance for thirty days, except, that under the
31 rights in "third priority class" in Schedule 4, the rights in "second priority

1 class" in Schedule 5, the rights of Willoughby T. Grace and Helen M. Grace
2 through Diversions 45, 48 and 49 in "first priority class", and the rights of
3 J. LaRue Robinson and Elizabeth Evans Robinson through Diversion 36 and of
4 Willoughby T. Grace and Helen M. Grace through Diversions 41, 42, 43, 44, 48
5 and 49 in "second priority class" in Schedule 6, and the rights in Schedule 8,
6 water may be diverted at a rate greater than the continuous flow allotment
7 hereinafter set forth therefor, provided that such diversion does not result
8 in the use under any of said rights of a total quantity of water during any
9 ninety-day period in excess of the equivalent of said continuous flow allowance
10 for the respective right for ninety days; and provided further, that such
11 practice of rotation or such use of "irrigation heads" shall not impair or
12 infringe the rights of any other claimant.

13 23. Nothing herein contained shall, or shall be construed to, pre-
14 vent any of the claimants herein, who jointly use a ditch, where there is a
15 continuous flow allotment to said ditch, from employing by agreement of such
16 joint users of said ditch a system of rotation in use as among themselves; or
17 prevent any claimant herein who has allotments in two or more ditches, from
18 using all or any portion of the aggregate of such allotments through each or
19 any of said ditches on all or any portion of his lands; provided, the total
20 quantity of water diverted by said claimant at any time shall not exceed said
21 aggregate of such allotments; and provided further, such practice of rotation
22 or such use of combined allotments shall not impair or infringe the rights of
23 any other claimant.

24 24. The term "directly apply to beneficial use" means the direct
25 conveyance and application of water diverted to beneficial use without inter-
26 mediate storage, except such regulatory storage as may be practiced for the
27 purpose of equalizing the flow of water diverted for a convenient irrigation
28 head.

29 25. The term "natural flow" means such flow as will naturally occur
30 at any given point in a stream from the runoff of the watershed which it drains,
31 from springs which naturally contribute to the stream, from seepage, and from

1 the quantities of water hereinafter allotted to the several claimants are at
2 said respective points of diversion from said stream system, except the point
3 of measurement of the allotment to W. B. Perry, R. L. Perry, Ivy Mae Heald,
4 and Susie Perry from Hickerson West Spring and Hickerson East Springs through the
5 Hickerson West Springs and Hicker East Springs Ditches (Diversions 133 and 134)
6 as set forth in Schedule 7 hereof, shall be at the head box of claimant's pipe
7 line; the points of measurement of the allotments of Setzer Forest Products, Inc.,
8 Helen L. Shiell and E. T. Kunzler and Edna M. Kunzler from Wolf Creek through
9 the Clark Ditch (Diversions 62), as set forth in Schedule 3 hereof, shall be at
10 head of the Setzer Pipe line for the Setzer Forest Products, Inc., and at site
11 of old grist mill in town of Greenville in NW $\frac{1}{4}$ SE $\frac{1}{4}$ of Section 3, T 26 N, R 9 E,
12 M.D.B. & M., for Helen L. Shiell and E. T. Kunzler and Edna M. Kunzler; the point
13 of measurement of the allotments of James T. Freeman and Elma L. Freeman, and
14 E. B. Bates and Minnie Bates from Lights Creek through the Freeman and Bates
15 Ditch (Diversions 88) as set forth in Schedule 4 hereof, shall be at the county
16 road crossing near the south line of Section 31, T 27 N, R 11 E, M.D.B. & M.;
17 the point of measurement of the allotments of Ralph Defanti and Elvezia Defanti,
18 and Fred Ratcliffe-Smith and Mildred Ratcliffe-Smith from Lights Creek through
19 the Defanti and Smith Ditch (Diversions 89) as set forth in Schedule 4 hereof,
20 shall be at the county road crossing referred to above, except that when the
21 allotment of Ralph Defanti and Elvezia Defanti, or any part thereof, is being
22 used upon their lands lying above said point of measurement then the point of
23 measurement of the water so used shall be at the head of the said Defanti and
24 Smith Ditch; the points of measurement of the allotment of J. B. Peter from
25 Peter Creek through the Peter Creek Upper and Peter Creek Barn Ditches (Diver-
26 sions 96 and 97) as set forth in Schedule 4 hereof, shall be at a point near the
27 head of the domestic pipe line and at a point near the new barn above the county
28 road, respectively; the point of measurement of the allotment of James G. Young,
29 William G. Young, George W. Young, and Hazel Dolphin from Montgomery Creek
30 through the Taylorsville Ditch (Diversions 53) as set forth in Schedule 6 hereof,
31 shall be measured above the cemetery tap where the ditch crosses the east line

1 of Section 34, T 26 N, R 10 E, M.D.B. & M., provided however, that not more
2 than two cubic feet per second shall be diverted at the head of said ditch;
3 the points of measurement of the allotments of Claude E. Young and Ivy M. Young,
4 W. H. Dolphin, H. C. Neer and Eva M. Neer, Lloyd E. Hardgrave and John A.
5 Hardgrave, Colburn J. Smith and Wilma T. Smith, Samuel F. Brown, Hazel Brown
6 and Fletcher L. Brown, Lee G. Johnson, S. S. Openshaw, Gerald Openshaw and Gene
7 Openshaw, Paul Sobrero and Helen Sobrero, T. L. Hannon and H. S. Hannon, George
8 F. Osmeier and Jane Osmeier, L. E. Wheelock and Nellie Wheelock, and Albert
9 A. Toscani, Ernest J. Toscani, Chester M. Toscani and Arthur F. Toscani from
10 Indian Creek through the Mill Race Ditch (Diversion 5A) as set forth in
11 Schedule 6 hereof, shall be measured at or near Young's Check on said ditch;
12 the point of measurement of the allotment of S. S. Openshaw, Gerald Openshaw
13 and Gene Openshaw, from Indian Creek through the Snyder Ditch (Diversion 55)
14 as set forth in Schedule 6 hereof, shall be measured at or near the north
15 line of the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of Section 26, T 26 N, R 10 E, M.D.B. & M.

16 30. The various claimants in the proceeding are entitled to "special
17 class", "interrelated" and "surplus class" water rights. Each of said groups
18 in said stream system as hereinbefore designated in paragraph 28, contains
19 rights in "special class" and "surplus class" in addition to "interrelated"
20 water rights, which rights in "special class" and "surplus class" are hereinafter
21 set forth in paragraphs 34 and 41 and Schedule 7, and paragraphs 48, 49 and 50
22 and Schedule 8, respectively. All allocations of "interrelated" water rights
23 are hereinafter set forth in Schedules 3, 4, 5 and 6.

24 31. The claimants entitled to rights in "special class" as enumerated
25 in said paragraphs ^{Bidwell} 34 and ^{Doyle} 41 and Schedule 7, and to rights in "surplus class"
26 as enumerated in said paragraphs ^{Res.} 48, ^{Taylor Bryson Dawn} 49 and 50 and Schedule 8, are entitled to
27 divert, during the seasons hereinafter stated in paragraph 32, the allotments
28 of water specified from the sources and through the diversions set forth after
29 their respective names in said paragraphs 34, 41, 48, 49 and 50 and Schedules
30 7 and 8, and apply said allotments of water to beneficial use for domestic,
31 municipal, resort, industrial, power, mining, stock-watering and irrigation

1 purposes upon their respective lands or place of service as shown on said D.W.R.
2 Map and described under their respective names in Schedule 1 hereof. Said
3 rights in "special class" set forth in said paragraphs 34 and 41 and Schedule 7
4 are equal in priority and correlative in right, are independent of each other,
5 except as to those diverting from a common source, but are superior in priority
6 and in right to all other rights in the stream system. Said rights in "surplus
7 class" set forth in said paragraphs 48, 49 and 50 and Schedule 8 are equal in
8 priority and correlative in right, are independent of each other, except as to
9 those diverting from a common source, but are subject and inferior to all other *
10 rights on the stream system. At all times when the available water supply of a
11 common source is inadequate to supply all of said rights in "special class" or
12 in "surplus class", then during the continuance of such shortage, the owners of
13 such rights shall prorate the respective supplies available for said "special
14 class" or said "surplus class" in accordance with the respective allotments set
15 forth after their respective names in said paragraphs 34, 41, 48, 49 and 50 and
16 Schedules 7 and 8. All rights in the Indian Creek stream system, other than said *
17 rights in "special class" and "surplus class" are interrelated and occur in four
18 groups as hereinbefore designated in paragraph 28, and are hereinafter respective-
19 ly set forth in Schedules 3, 4, 5 and 6. All rights set forth in each of said
20 Schedules 3, 4 and 5 are independent of all rights in the remaining two of said
21 schedules, but are superior in priority and in right to all rights set forth in
22 said Schedule 6.

23 (32) All allotments of "first priority class" set forth in Schedule 3
24 hereof, except those for Diversion 62, all allotments of "first priority class"
25 set forth in Schedule 4 hereof, all allotments of "first priority class" set forth
26 in Schedule 5 hereof, all allotments of "first priority class", the allotments
27 of "second priority class" of A. J. Sheehan and C. J. Sheehan, David R. Strong
28 and B. B. Gregory and Estella E. Gregory through Diversion 54 and of S. S. Openshaw,
29 Gerald Openshaw and Gene Openshaw through Diversion 55 and the allotments of
30 "third priority class" of H. C. Neer and F. C. Neer, Mrs. A. L. Gorbet
31 and A. J. Sheehan and C. J. Sheehan through Diversions 57A, 58A and 58B,

1 respectively, set forth in Schedule 6 hereof, and all allotments set forth in
2 Schedule 7 hereof, shall be for continuous usage without regard to season; the
3 allotments of "first priority class" through Diversion 62 and all allotments of
4 "second priority class" and "third priority class" set forth in said Schedule 3,
5 all allotments of "second priority class" and "third priority class" set forth
6 in said Schedule 4, and all allotments of "second priority class" and "third
7 priority class" set forth in said Schedule 6, except as hereinabove provided,
8 shall be for continuous usage during the season from March 1 to October 31, both
9 dates inclusive, of each and every year; all allotments of "second priority class"
10 set forth in said Schedule 5, and all allotments set forth in Schedule 8 hereof,
11 shall be for continuous usage during the season from March 15 to October 15, both
12 dates inclusive, of each and every year; all allotments set forth in paragraphs
13 34, 41 and 48 for the storage of the water of the stream system shall be for
14 diversion to storage during the season from October 1 of each year to June 30,
15 both dates inclusive, of the succeeding year; and all allotments set forth in
16 paragraphs 49 and 50 shall be for continuous usage for the respective periods
17 set forth in said paragraphs.

18 Definition of Water Rights in Wolf Creek Group

19 33. The Wolf Creek Group, as hereinbefore designated in paragraph 28,
20 comprises rights of "special class", "first priority class", "second priority
21 class", "third priority class" and "surplus class". Said "special class"
22 embraces sixteen rights defined in paragraphs 31 and 34 and Schedule 7 hereof.

23 34. BIDWELL WATER COMPANY is entitled to divert as a right in said
24 "special class" from the natural flow of North Canyon at a point designated on
25 said D.W.R. Map as Diversion 64, described in Schedule 2 hereof, for storage in
26 Round Valley Reservoir (Bidwell Lake),

27 4,800 acre-feet per annum,
28 during the season hereinbefore stated in paragraph 32, for municipal purposes,
29 or as much of said amount of water as is impounded in said Round Valley Reservoir,
30 situated in S $\frac{1}{2}$ and SW $\frac{1}{4}$ of NW $\frac{1}{4}$ of Section 15, SE $\frac{1}{4}$ and SE $\frac{1}{4}$ of NE $\frac{1}{4}$ of Section 16,
31 E $\frac{1}{2}$ of NW $\frac{1}{4}$ and NE $\frac{1}{4}$ of Section 22, all in T 26 N, R 9 E, M.D.B. & M., and thereafter

1 withdrawn from said reservoir, during the period from January 1 to December 31,
2 both dates inclusive, of each year and applied to beneficial use for said
3 purpose in the town of Greenville.

4 35. Subject to such of the "special class" rights defined in para-
5 graphs 31 and 34 and Schedule 7, as are in the Wolf Creek Group, the various
6 claimants enumerated in Schedule 3 hereof are entitled to rights in "first
7 priority class", "second priority class" and "third priority class", in and to
8 the use of the natural flow of Wolf Creek and its tributaries during the seasons
9 hereinbefore stated in paragraph 32, for domestic, stock-watering, industrial and
10 irrigation purposes upon their respective lands as shown on said D.W.R. Map and
11 as described under their respective names in Schedule 1 hereof, in accordance
12 with the acreages to be supplied, priorities and quantities of water allotted, at
13 the points of diversion as numbered and through the diversion systems as named
14 after their respective names in said Schedule 3. Said rights in "first priority
15 class" are equal in priority and correlative in right, but are superior in prior-
16 ity and in right to all other rights in said Schedule 3, and at all times when
17 the available water supply of Wolf Creek and its tributaries is inadequate to
18 supply all of said rights in "first priority class", then during the continuance
19 of such shortage, the owners of such rights shall prorate the available water
20 supply, if any, in excess of the quantity necessary to supply said prior rights,
21 in accordance with their respective allotments in said "first priority class" as
22 set forth in said Schedule 3. Said rights in "second priority class" are equal
23 in priority and correlative in right, are subject and inferior to said rights
24 in "first priority class", but are superior in priority and in right to all
25 other rights in said Schedule 3, and at all times when the available water supply
26 of Wolf Creek and its tributaries is inadequate to supply all of said rights in
27 "second priority class", then during the continuance of such shortage, the
28 owners of such rights shall prorate the available supply, if any, in excess of
29 the quantity required to supply said prior rights, in accordance with their
30 respective allotments in said "second priority class" as set forth in said
31 Schedule 3. Said rights in "third priority class" are equal in priority and

1 correlative in right, but are subject and inferior to all other rights in said
2 Schedule 3, and at all times when the available water supply of Wolf Creek and
3 its tributaries is inadequate to supply all of said rights in "third priority
4 class", then during the continuance of such shortage, the owners of such rights
5 shall prorate the available water supply, if any, in excess of the quantity
6 required to supply said prior rights, in accordance with their respective allot-
7 ments in said "third priority class" as set forth in said Schedule 3; provided
8 however, that whenever the flow of Pecks Valley Creek drops to 0.50 cubic foot
9 per second or less, Albert E. McKeen and Randall H. Smith may divert the entire
10 flow therein, subject to the return of drainage to Pecks Valley Creek insofar
11 as possible contingent upon the proper irrigation of their lands; provided
12 further, that E. T. Kunzler and Edna M. Kunzler may divert 0.70 cubic foot per
13 second from Williams Creek in lieu of an equal amount of water from Wolf Creek;
14 provided further, that Helen L. Shiell is entitled to stock water in the channel
15 of Williams Creek in the NW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 2, T 26 N, R 9 E, M.D.B. & M., before
16 any water may be diverted from said channel by Delfina Taddei and A. P. Pedretti
17 for use upon their lands as described in Schedule 1 hereof; provided further,
18 that the United States of America, in trust for the Indian Service, may divert
19 0.05 cubic foot per second from Williams Creek through Diversion 79A, as de-
20 scribed in Schedule 2 hereof, in lieu of an equal amount of water from Wolf
21 Creek subject to all other rights set forth herein from said Williams Creek;
22 and provided further, that the entire flow of Wolf Creek above the Clark Ditch
23 shall be turned into the channel supplying said Clark Ditch whenever said flow *
24 is required to supply the "first priority class" rights of Setzer Forest Products,
25 Inc., Helen L. Shiell, and E. T. Kunzler and Edna M. Kunzler therein as set
26 forth in Schedule 3 hereof.

27 36. Subject to such of the "special class" rights as are in the Wolf
28 Creek Group and to "interrelated" rights set forth in said Schedule 3, the
29 claimants enumerated in Schedule 8 hereof in the Wolf Creek Group are entitled
30 to "surplus class" rights as defined in paragraph 31 and Schedule 8. Water may
31 be diverted under all rights in said "surplus class" in said Schedule 8 at twice

1 the average rate of diversion respectively set forth therefor, subject to the
2 provisions hereinbefore set forth in paragraph 22.

3 Definition of Water Rights in Lights Creek Group

4 37. The Lights Creek Group, as hereinbefore designated in paragraph
5 28, comprises rights of "special class", "first priority class", "second prior-
6 ity class", "third priority class" and "surplus class". Said "special class"
7 embraces four rights defined in paragraph 31 and Schedule 7 hereof.

8 38. Subject to such of the "special class" rights defined in para-
9 graph 31 and Schedule 7, as are in the Lights Creek Group, the various claimants
10 enumerated in Schedule 4 hereof, are entitled to rights in "first priority class",
11 "second priority class" and "third priority class", in and to the use of the
12 natural flow of Lights Creek and its tributaries during the seasons hereinbefore
13 stated in paragraph 32, for domestic, stock-watering, power, industrial, and
14 irrigation purposes upon their respective lands as shown on said D.W.R. Map and
15 as described under their respective names in Schedule 1 hereof in accordance
16 with the acreages to be supplied, priorities and quantities of water allotted,
17 at the points of diversion as numbered and through the diversion systems as
18 named after their respective names in said Schedule 4. Said rights in "first
19 priority class" are equal in priority and correlative in right, but are superior
20 in priority and in right to all other rights in said Schedule 4, and at all times
21 when the available water supply of Lights Creek and its tributaries is inadequate
22 to supply all of said rights in "first priority class", then during the con-
23 tinuance of such shortage, the owners of such rights shall prorate the available
24 water supply, if any, in excess of the quantity necessary to supply said prior
25 rights, in accordance with their respective allotments in said "first priority
26 class" as set forth in said Schedule 4. Said rights in "second priority class"
27 are equal in priority and correlative in right, are subject and inferior to said
28 rights in "first priority class", but are superior in priority and in right to
29 all other rights in said Schedule 4, and at all times when the available water
30 supply of Lights Creek and its tributaries is inadequate to supply all of said
31 rights in "second priority class", then during the continuance of such shortage,

1 the owners of such rights shall prorate the available supply, if any, in ex-
2 cess of the quantity required to supply said prior rights, in accordance with
3 their respective allotments in said "second priority class" as set forth in said
4 Schedule 4, except as hereinafter provided in this paragraph. Said rights in
5 "third priority class" are equal in priority and correlative in right, but are
6 subject and inferior to all other rights in said Schedule 4, and at all times
7 when the available water supply of Lights Creek and its tributaries is in-
8 adequate to supply all of said rights in "third priority class", then during
9 the continuance of such shortage, the owners of such rights shall prorate the
10 available water supply, if any, in excess of the quantity required to supply
11 said prior rights, in accordance with their respective allotments in said
12 "third priority class" as set forth in said Schedule 4; provided however, that
13 whenever the available water supply of Lights Creek and its tributaries is in
14 excess of 27.725 cubic feet per second (the ^{Total} aggregate of allotments in said
15 Schedule 4), water may be diverted from such excess under all rights in said
16 "third priority class" at twice the average rates of diversion set forth there-
17 for in said Schedule 4 subject to the provisions hereinbefore set forth in
18 paragraph 22; provided further, that whenever the flow of Lights Creek above
19 the Freeman and Bates Ditch recedes to 8.00 cubic feet per second or less,
20 then James T. Freeman and Elma L. Freeman, E. B. Bates and Minnie Bates, Ralph
21 Defanti, and Elvezia Defanti and Fred Ratcliffe-Smith and Mildred Ratcliffe-Smith
22 collectively, are entitled to divert the entire available water supply therein
23 for use upon their lands in proportion, insofar as possible, to the respective
24 amounts set forth after their respective names under "second priority class" in
25 Schedule 4 hereof without regard to other rights in said "second priority class"
26 as set forth in said Schedule 4, provided further, that at all such times James
27 T. Freeman and Elma L. Freeman and E. B. Bates and Minnie Bates, collectively,
28 are entitled to divert one-half the said flow of said Lights Creek at the head
29 of the Freeman and Bates Ditch, as provided in this paragraph, into said
30 Freeman and Bates Ditch; provided further, whenever the flow of Lights Creek at
31 the Burns dam available for "second priority class" rights as set forth in said

1 Schedule 4 recedes in July or August of each year to 2.00 cubic feet per second
2 or less, Martin A. Maier and Cleo B. Maier are entitled to divert through the
3 Burns Ditch (Diversion 90) 1.00 cubic foot per second of the said available flow
4 and W. S. Quigley and Icie A. Quigley are entitled to divert through the Quigley
5 Upper Ditch (Diversion 91) the remainder of said available flow for use upon
6 their respective lands hereinafter described under their respective names in
7 Schedule 1 until September 1 of each year after which date the allotments and
8 priorities set forth in said Schedule 4 shall again be effective; and provided
9 further, that J. B. Peter is entitled to divert one-half the combined allotments
10 of water to J. B. Peter and to Arthur Peter and Emma Peter through Diversion 93,
11 as set forth in said Schedule 4, whenever the said J. B. Peter requires said
12 water for the irrigation of his lands irrigated from said Diversion 93.

13 39. Subject to such of the "special class" rights as are in the
14 Lights Creek Group and to "interrelated" rights set forth in said Schedule 4,
15 such of the claimants enumerated in Schedule 8 hereof as are in the Lights Creek
16 Group, are entitled to "surplus class" rights as defined in paragraph 31 and
17 Schedule 8. Water may be diverted under all rights in said "surplus class" in
18 said Schedule 8 at twice the average rate of diversion respectively set forth
19 therefor, subject to the provisions hereinbefore set forth in paragraph 22.

20 Definition of Water Rights in Upper Tributary Group

21 40. The Upper Tributary Group, as hereinbefore designated in para-
22 graph 28, comprises rights of "special class", "first priority class", "second
23 priority class" and "surplus class". Said "special class" embraces one right
24 defined in paragraphs 31 and 41.

25 41. K. R. DOYLE AND MURRAY DOYLE, collectively, are entitled to
26 divert as a right in said "special class" from the natural flow of Fitch Canyon
27 at a point designated on said D. W. R. Map as Diversion 7 F, described in
28 Schedule 2 hereof, for storage in Doyle Reservoir,

29 45 acre-feet per annum,
30 during the season hereinbefore stated in paragraph 32, for domestic, stock-
31 watering and irrigation purposes, or as much of said amount of water as is

1 impounded in said Doyle Reservoir, situated in Lots 2 and 3 of Section 4, T 26 N,
2 R 14 E, M.D.B. & M., and thereafter withdrawn from said reservoir, during the
3 period from March 1 to November 15, both dates inclusive, of each year and
4 applied to beneficial use for said purposes on the lands hereinafter described
5 under their names in Schedule 1.

6 42. Subject to the "special class" right defined in paragraphs 31 and
7 41, the various claimants enumerated in Schedule 5 hereof, are entitled to rights
8 in "first priority class" and "second priority class", in and to the use of the
9 natural flow of the streams within the Upper Tributary Area during the seasons
10 hereinbefore stated in paragraph 32, for domestic, stock-watering, irrigation and
11 industrial purposes upon their respective lands and within the respective areas
12 as shown on said D.W.R. Map and as described under their respective names in
13 Schedule 1 hereof, in accordance with the acreages to be supplied, priorities
14 and quantities of water allotted, at the points of diversion as numbered and
15 through the diversion systems as named after their respective names in said
16 Schedule 5. Said rights in "first priority class" are equal in priority and
17 correlative in right, but are superior in priority and in right to all other
18 rights in said Schedule 5, and at all times when the available water supply of
19 any source set forth in said Schedule 5 is inadequate to supply all of said
20 rights in "first priority class" from said source, then during the continuance
21 of such shortage, the owners of such rights shall prorate the available water
22 supply, if any, in excess of the quantity necessary to supply said prior right,
23 in accordance with their respective allotments in said "first priority class"
24 as set forth in said Schedule 5. Said rights in "second priority class" are
25 equal in priority and correlative in right but are subject and inferior to all
26 other rights in said Schedule 5, and at all times when the available water supply
27 of any source set forth in said Schedule 5 is inadequate to supply all of said
28 rights in "second priority class" from said source, then during the continuance
29 of such shortage, the owners of such rights shall prorate the available supply,
30 if any, in excess of the quantity required to supply said prior rights, in
31 accordance with their respective allotments in said "second priority class" as

1 set forth in said Schedule 5; provided however, that whenever the flows of the
2 respective sources supplying said "second priority class" rights are in excess
3 of the "first priority class" and "second priority class" rights from said
4 sources as set forth in said Schedule 5, then water may be diverted by said
5 "second priority class" rights at twice the average rate of diversion respective-
6 ly set forth therefor in said Schedule 5, subject to the provisions hereinbefore
7 set forth in paragraph 22; provided further, that the combined consumption of
8 water by said Clover Valley Lumber Company for industrial purposes from streams
9 within the said Upper Tributary Group shall not at any time exceed 1.00 cubic
10 foot per second; provided further, that in moving its logging operations from
11 time to time said company shall not impair or infringe the rights of any other
12 claimant.

13 43. Subject to such of the "special class" rights as are in the Upper
14 Tributary Group and to "interrelated" rights set forth in said Schedule 5, such
15 of the claimants enumerated in Schedule 8 hereof as are in the Upper Tributary
16 Group, are entitled to "surplus class" rights as defined in paragraph 31 and
17 Schedule 8. Water may be diverted under all rights in said "surplus class" in
18 said Schedule 8 at twice the average rates of diversion respectively set forth
19 therefor, subject to the provisions hereinbefore set forth in paragraph 22, and
20 the water allocated in said Schedule 8 to R. H. Conklin may be used on any
21 portion or all of said claimants 1553.01 acres of riparian land included in
22 the area described in Schedule 1 hereof.

23 Definition of Water Rights in Indian Creek in Genesee and Indian Valleys Group

24 44. The Indian Creek in Genesee and Indian Valleys Group, as herein-
25 before designated in paragraph 28, comprises rights of "special class", "first
26 priority class", "second priority class", "third priority class" and "surplus
27 class". Said "special class" embraces eighteen rights defined in paragraph 31
28 and Schedule 7 hereof.

29 45. Subject to such of the "special class" rights defined in para-
30 graph 31 and Schedule 7, as are in the Indian Creek in Genesee and Indian Valleys
31 Group, the various claimants enumerated in Schedule 6 hereof, are entitled to

1 rights in "first priority class", "second priority class" and "third priority
2 class", in and to the use of the natural flow of Indian Creek and its tributaries
3 in Genesee and Indian Valleys during the seasons hereinbefore stated in para-
4 graph 32, for municipal, domestic, stock-watering, power, mining, fish culture,
5 and irrigation purposes upon their respective lands and within the respective
6 areas as shown on said D.W.R. Map and as described under their respective names
7 in Schedule 1 hereof, in accordance with the acreages to be supplied, priorities
8 and quantities of water allotted, at the points of diversion as numbered and
9 through the diversion systems as named after their respective names in said
10 Schedule 6. Said rights in "first priority class" are equal in priority and
11 correlative in right, but are superior in priority and in right to all other
12 rights in said Schedule 6, and at all times when the available water supply of
13 Indian Creek and its tributaries in Genesee and Indian Valleys is inadequate
14 to supply all of said rights in "first priority class", then during the con-
15 tinuance of such shortage, the owners of such rights shall prorate the avail-
16 able water supply if any, in excess of the quantity necessary to supply said
17 prior rights, in accordance with their respective allotments in said "first
18 priority class" as set forth in said Schedule 6. Said rights in "second
19 priority class" are equal in priority and correlative in right, are subject and
20 inferior to said rights in "first priority class", but are superior in priority
21 and in right to all other rights in said Schedule 6, and at all times when the
22 available water supply of Indian Creek and its tributaries in Genesee and
23 Indian Valleys is inadequate to supply all of said rights in "second priority
24 class", then during the continuance of such shortage, the owners of such rights
25 shall prorate the available supply, if any, in excess of the quantity required
26 to supply said prior rights, in accordance with their respective allotments in
27 said "second priority class" as set forth in said Schedule 6, except as herein-
28 after provided in paragraph 46. Said rights in "third priority class" are
29 equal in priority and correlative in right, are subject and inferior to all
30 other rights in said Schedule 6, and at all times when the available water
31 supply of Indian Creek and its tributaries in Genesee and Indian Valleys is

1 inadequate to supply all of said rights in "third priority class", then during
2 the continuance of such shortage, the owners of such rights shall prorate the
3 available water supply, if any, in excess of the quantity required to supply
4 said prior rights, in accordance with their respective allotments in said
5 "third priority class" as set forth in said Schedule 6, except as hereinafter
6 provided in paragraph 46, provided however, that whenever the flow of Indian
7 Creek and Ward Creek, above their confluence in Genesee Valley is in excess of
8 the "first priority class" and "second priority class" rights set forth under
9 Diversions 36, 41, 42, 43 and 44, in said Schedule 6, then water may be diverted
10 by J. LaRue Robinson and Elizabeth Evans Robinson through said Diversion 36 and
11 by Willoughby T. Grace and Helen M. Grace through said Diversions 41, 42, 43
12 and 44 at twice the average rate of diversion respectively set forth therefor
13 in said "second priority class" in said Schedule 6 subject to the provisions
14 hereinbefore set forth in paragraph 22, and provided further, that whenever
15 the flow of Hosselkus Creek and Little Grizzly Creek above their confluence with
16 Indian Creek is in excess of the "first priority class" and "second priority
17 class" rights set forth under Diversions 45, 48, and 49 in said Schedule 6, then
18 water may be diverted by Willoughby T. Grace and Helen M. Grace through said
19 Diversions 45, 48 and 49 at three times the average rate of diversion respectively
20 set forth therefor in said "first priority class" and "second priority class"
21 in said Schedule 6 subject to the provisions hereinbefore set forth in para-
22 graph 22.

23 46. W. H. Dolphin; H. C. Neer and Eva. M. Neer; Lloyd E. Hardgrave and
24 John A. Hardgrave; Colburn J. Smith and Wilma T. Smith; Samuel F. Brown; Hazel
25 Brown and Fletcher L. Brown; Lee G. Johnson; S. S. Openshaw, Gerald Openshaw and
26 Gene Openshaw; Paul Sobrero and Helen Sobrero; Samuel F. Brown and Hazel Brown;
27 T. L. Hannon, H. S. Hannon, George F. Osmeyer and Jane Osmeyer; L.E. Wheelock
28 and Nellie Wheelock; and Albert A. Toscani, Ernest J. Toscani, Chester M.
29 Toscani and Arthur F. Toscani are shareholders in the Mill Race Ditch and are
30 entitled to divert and use all allotments to said "second priority class" and to
31 said "third priority class" set forth under Diversion 54 in Schedule 6 hereof,

1 whenever required for the irrigation of their lands, in proportion to their
 2 respective share ownership in the said Mill Race Ditch as follows:

3	<u>Shareholder</u>	<u>Shares</u>
4	W. H. Dolphin	0.73 ✓ .73

22 provided however, whenever said shareholders divert and use all of said allot-
 23 ments as hereinbefore provided, including the allotments of non-shareholders
 24 in said ditch, then said shareholders shall allow an equivalent amount of water
 25 to flow to said non-shareholders for use on the lands of said non-shareholders
 26 subsequent to aforesaid use by said shareholders; provided further, that Albert
 27 A. Toscani, Ernest J. Toscani, Chester M. Toscani and Arthur F. Toscani may
 28 divert 3.70 cubic feet per second through Diversion 57 and S. S. Openshaw,
 29 Gerald Openshaw and Gene Openshaw may divert 4.75 cubic feet per second through
 30 Diversion 59 as "third priority class" rights in lieu of equal amounts of water
 31 as "second priority class" rights through Diversion 54 as set forth in said

1 Schedule 6.

2 47. Subject to all rights hereinbefore defined, the claimants
3 enumerated in paragraphs 48, 49 and 50 and such of the claimants enumerated in
4 Schedule 8 hereof as are in the Indian Creek in Genesee and Indian Valleys
5 Group are entitled to "surplus class" rights as defined in paragraph 31 and
6 said paragraphs 48, 49 and 50 and said Schedule 8. Water may be diverted under
7 all rights in said "surplus class" in said Schedule 8 at twice the average rates
8 of diversion respectively set forth therefor, subject to the provisions herein-
9 before set forth in paragraph 22.

10 48. J. LARUE ROBINSON AND ELIZABETH EVANS ROBINSON, collectively,
11 are entitled to divert as a right in said "surplus class" from the natural flow
12 of *Hungry Creek at a point designated on said D.W.R. Map as Diversion 1, de-
13 scribed in Schedule 2 hereof, for storage in Taylor Lake,
14 200 acre-feet per annum,
15 during the period hereinbefore designated in paragraph 32, or as much of said
16 amount of water as is impounded in said Taylor Lake situated in $N\frac{1}{2}$ of $SW\frac{1}{4}$
17 Section 35, T 27 N, R 11 E, M.D.B. & M., and thereafter withdrawn from said
18 reservoir, during the period from January 1 to December 31, both dates inclusive,
19 of each year, for domestic and stock-watering purposes and from March 1 to
20 November 15, both dates inclusive, of each year, for irrigation purposes on the
21 lands hereinafter described under their names in Schedule 1.

22 49. CHARLES H. BRYSON, SR., AND ESTATE OF KATHREN BRYSON, collectively,
23 are entitled to divert as a right in said "surplus class", from the natural
24 flow of an unnamed stream tributary to Indian Creek, at a point designated on
25 said D.W.R. Map as Diversion 117, described in Schedule 2 hereof, through the
26 proposed Avrit Pipe line,

27 0.016 cubic foot per second,
28 during the period from January 1 to December 31, both dates inclusive, of each
29 year, for domestic and resort purposes on their lands hereinafter described
30 under their names in Schedule 1, all in accordance with Application 9046 filed
31 with the Department, provided that prior to December 1, 1951, or such further

* Exclusive water right. No other users on Hungry Crk.

1 time as may be hereafter granted by the Court herein, said Charles H. Bryson,
2 Sr. and Estate of Kathren Bryson shall have completed said appropriation from
3 said unnamed stream and applied said water to beneficial use in accordance
4 with the terms of Permit 5009 issued by the Department on said Application 9046,
5 and shall have submitted evidence of such completed appropriation and use to
6 the Superior Court of the State of California, in and for the County of Plumas,
7 and subject to the provisions of such supplemental decree as the court herein
8 may hereafter enter.

9 50. DAWN INSTITUTE OF SCIENCE AND ART is entitled to divert as a
10 right in said "surplus class", from the natural flow of Jackson Springs No. 2,
11 at a point designated on said D.W.R. Map as Diversion 120, described in
12 Schedule 2 hereof, through the proposed Jackson Springs Pipe line,
13 1.25 cubic feet per second,
14 during the period from January 1 to December 31, both dates inclusive, of each
15 year, for domestic and resort purposes on its lands hereinafter described under
16 its name in Schedule 1, all in accordance with Application 9968 filed with the
17 Department, provided that prior to December 1, 1951, or such further time as
18 may be hereafter granted by the Court herein, said Dawn Institute of Science
19 and Art shall have completed said appropriation from Jackson Springs No. 2 and
20 applied said water to beneficial use in accordance with the terms of Permit 5684
21 issued by the Department on said Application 9968, and shall have submitted
22 evidence of such completed appropriation and use to the Superior Court of the
23 State of California, in and for the County of Plumas, and subject to the pro-
24 visions of such supplemental decree as the Court herein may hereafter enter.

1 IT IS FURTHER ORDERED, ADJUDGED AND DECREED as follows:

2 51. That the Court retains continuing jurisdiction of the parties to
3 this proceeding, and of the subject matter thereof, and upon application of any
4 party hereto, or successor in interest thereof, or upon its own motion, to re-
5 view this decree and to change or modify the same as the interests of justice
6 may require.

7 52. That determination of the respective rights of Dora Johnson,
8 J. C. Taresh, and the United States of America, in trust for the heirs of Orbey
9 Charley, in and to the use of water from Foreman Spring is reserved for future
10 determination by this Court.

11 53. That claimant California-Engels Mining Company, who filed Proof
12 24 in this proceeding, have no right, title or interest in or to the water of
13 East Fork of Lights Creek claimed in said proof.

14 54. That claimants Solomon Karl and Haskell Karl, who filed Proof 53
15 in this proceeding, have no right, title or interest in or to the water of
16 Williams Creek claimed in said proof.

17 55. That each and every party to this action, his or her agents,
18 successors, grantees and assigns, be and hereby are estopped to object to or
19 interfere with the respective rights of others which are decreed herein.

20 56. That each and every party to this action, his or her agents,
21 successors, grantees and assigns, be and hereby are perpetually enjoined and
22 restrained from doing anything in violation of the terms or provisions of this
23 judgment and decree, and from diverting any water from said Indian Creek stream
24 system at any time in excess of a quantity reasonably necessary for, and actually
25 applied to, reasonable beneficial use, under and by reasonable methods of diver-
26 sion and use, and from doing anything, directly or indirectly, that will obstruct
27 or interfere with any right of another adjudged and decreed herein.

28 57. The Department having computed the entire expense incurred in
29 performing the duties prescribed, in this proceeding, and having equitably
30 apportioned against the parties to this proceeding the amount by which said
31 entire expense exceeded the total amount received from claimants on account of

1 fees paid at the time of submission of proofs of claim, and having given notice
2 thereof to the parties to this proceeding; no objection having been made to said
3 expense or apportionment thereof; said apportionments having become due and
4 payable to said Department by the respective parties; and all parties having
5 heretofore paid their respective apportionments excepting those parties against
6 whom judgment in favor of said Department is rendered as follows:

7 IT IS FURTHER ORDERED, ADJUDGED AND DECREED that the Department of
8 Public Works, Division of Water Resources, acting through the State Engineer, do
9 have and recover of and from the respective parties to this proceeding the
10 amounts of money as respectively hereinafter set forth after their respective
11 names together with interest thereon from date hereof until paid at the rate

October 7, 1941

THIS INDENTURE, made and entered into this 7th day of October, 1941, by and between J. LARUE ROBINSON, ELIZABETH EVANS ROBINSON, and ROWENA EVANS MORAGHAN, as the former directors, and as the present Trustees of the property of the former stockholders of the former J. N. Evans Estate Company, which was owned by the former J. N. Evans Estate Company up until the time of its dissolution in the year 1928, the former J. N. Evans Estate Company having been a corporation which was organized and which existed under and by virtue of the laws of the State of Nevada until the year 1928, the parties of the first part, and J. LARUE ROBINSON and ELIZABETH EVANS ROBINSON, his wife, of the City of Reno, County of Washoe, State of Nevada, the parties of the second part,

W I T N E S S E T H :

That, for and in consideration of the sum of ten (\$10.00) dollars, lawful money of the United States of America, paid by the parties of the second part to the parties of the first part, the receipt of which is hereby acknowledged, and other good and sufficient consideration it moving, the said parties of the first part do by these presents grant, bargain, sell, convey, and confirm unto the said parties of the second part, and to their heirs and assigns forever, all those certain lots, pieces, and parcels of land situate in Genesee Valley, Plumas County, State of California, and bounded and described as follows, to-wit:

The $W\frac{1}{2}$ of $SE\frac{1}{4}$, the $S\frac{1}{2}$ of $SW\frac{1}{4}$ of Section 2; the Northeasterly part of the $SE\frac{1}{4}$ of $SE\frac{1}{4}$ of Section 3; containing about 30 acres, more or less; the Northeasterly part of the $NE\frac{1}{4}$ of $NE\frac{1}{4}$ of Section 10, containing about 15 acres, more or less; the $NW\frac{1}{4}$ of $NW\frac{1}{4}$ and that part of the $SW\frac{1}{4}$ of $NW\frac{1}{4}$ north of Indian Creek, Section 11, containing about 55 acres, more or less; all in Township 25 N., R. 11 E., M. D. M. in Plumas County California.

Also $NE\frac{1}{4}$ of $SE\frac{1}{4}$ and $E\frac{1}{2}$ of $NW\frac{1}{4}$ of $SE\frac{1}{4}$ of Section 31, Township 26 N., R. 12 E., M. D. M., containing about 60 acres, more or less.

Also $N\frac{1}{2}$ of $SE\frac{1}{4}$, the $SW\frac{1}{4}$ of $SE\frac{1}{4}$; and $S\frac{1}{2}$ of $SW\frac{1}{4}$ of Section 36, Township 26 N., R. 11 E., M. D. M., containing about 200 acres, more or less.

Also, Lot numbered 1, and $NE\frac{1}{4}$ of $SE\frac{1}{4}$ of Section 2, and Lots numbered 3 and 4 and the $NW\frac{1}{4}$ of $SW\frac{1}{4}$ of Section 1, Township 25 N., R. 11 E., in the district of lands subject to sale at Susanville, California; containing about 166.66 acres, more or less.

Also, all water, etc., including 500 inches of the water of Indian Creek described in a certain notice of location made by Charles Robertson, December 4th., 1878, and recorded December 4th., 1878, in Vol. 1 of Miscellaneous Records, Page 150, Records of Plumas County, California.

Also all water secured by possession of Taylor Lake.

Also, the following described real property:

The Southwest Quarter ($SW\frac{1}{4}$) of the Northwest Quarter ($NW\frac{1}{4}$) and the Northwest Quarter ($NW\frac{1}{4}$) of the Southwest Quarter ($SW\frac{1}{4}$) of Section Thirty-five (35), Township Twenty-seven (27) North, Range Eleven (11) East, M. D. B. & M.

And also, all other real property owned by J. N. Evans Estate Company lying and being in the said Genesee Valley, Plumas County, California.

TOGETHER WITH, all and singular, the tenements, hereditaments, and appurtenances thereunto belonging, or in any wise appertaining, and the reversion and reversions, remainder

and remainders, rents, issues and profits thereof; and all water rights thereunto appurtenant or belonging.

TO HAVE AND TO HOLD, all and singular, the said premises, together with the appurtenances, unto the said parties of the second part, their heirs and assigns forever.

THIS DEED is made to correct an error in the description of the premises conveyed in a prior deed from the J. N. Evans Estate Company to J. LaRue Robinson and Elizabeth Evans Robinson, dated 17th day of September, 1928, and recorded in deed record "Deeds," Volume 61, Page 138, in the office of the County Recorder of Plumas County, California; it having been the intention of the parties by such prior deed to convey the premises hereinabove described.

IN WITNESS WHEREOF, the parties of the first part have signed this instrument, and have caused the corporate seal of the former J. N. Evans Estate Company to be hereunto affixed, the day and year in this indenture first above written.

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged,
JOHN REININGHAUS, a married man as his sole and separate property ("Grantor"),
hereby GRANTS to
THE NATURE CONSERVANCY, a District of Columbia non-profit corporation ("Grantee"),
the real property in the County of Plumas, State of California, more particularly described on
Exhibit A attached hereto.

Together with all water, water rights, water appropriations, licenses, ditches, ditch rights-of-way and ditch rights, easements and rights of way as heretofore used and enjoyed in connection with the above-described lands, including all right, title and interest in and to all appropriative, riparian or other water rights that are appurtenant to or may exist with respect to the above-described lands, including but not limited to (i) those water rights or relevant portions of them described as belonging to J. LARUE ROBINSON AND ELIZABETH EVANS ROBINSON in the adjudication entitled "In the Matter of the Determination of The Rights of the Various Claimants to the Water of Indian Creek Stream System in Plumas County, Decree No. 4185 California, Superior Court Plumas County", dated December 19, 1950, as it has or may be amended including the so called "Surplus Class" rights from the flow of Hungry Creek stored in Taylor Lake and all implied or express easements for the conveyance of water from and including Diversion 36, as described in the above referenced Decree No 4185; (ii) that certain License for Diversion and Use of Water License No. 9165, Application No. 12844, Permit No. 7617 issued by the State of California-The Resources Agency-State Water Resources Control Board ("Water Resources Board"), recorded in the Plumas County California Records on March 16, 1970 in Volume 193, Page 232; (iii) that certain License for Diversion and Use of Water License No. 2223, Application No. 8460, Permit No. 4682 issued by the Water Resources Board; and (iv) all hereditaments, easements, incidents and appurtenances thereto and all of Grantor's

interest in all oil, gas, hydrocarbons and minerals, and all surface and subsurface rights, and all hereditaments, easements, incidents and appurtenances thereto. Nothing herein is intended nor shall it be construed as in any way severing any water rights, including riparian rights, that may exist on either the above-described lands or Grantor's remaining lands as more particularly described on Exhibit B attached hereto and incorporated here by this reference ("Grantor's Remaining Lands"). The water rights associated with the Grantor's Remaining Lands as well as the water rights on the above-described lands are intended to remain the same as they would be absent the grant contained in this Grant Deed. Grantor transfers, assigns and conveys to Grantee all of those certain improvements, fixtures and other personal property associated with the water system located on or appurtenant to the real property. Together with easements for pedestrian and vehicular ingress and egress on existing roads over or appurtenant to Grantor's Remaining Lands; provided, however, that said easements (i) shall be non-exclusive; (ii) shall be for the purpose of providing pedestrian and vehicular access from the existing county road to the above-described lands being acquired by Grantee, and for no other purpose whatsoever; (iii) shall be for the benefit of the real property being acquired by Grantee only; and (iv) shall not obligate Grantor to maintain, repair or improve any existing roads.

GRANT DEED

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged,

THE NATURE CONSERVANCY,
a District of Columbia nonprofit corporation ("Grantor"),

Hereby GRANTS to

FEATHER RIVER LAND TRUST,
a California nonprofit public benefit corporation ("Grantee")

the real property in the County of Plumas, State of California, more particularly described on
Exhibit A attached hereto.

Together with all water, water rights, water appropriations, licenses, ditches, ditch rights-of-way and ditch rights, easements and rights of way as heretofore used and enjoyed in connection with the above-described lands, including all right, title and interest in and to all appropriative, riparian or other water rights that are appurtenant to or may exist with respect to the above-described lands, including but not limited to (i) those water rights or relevant portions of them described as belonging to J. LARUE ROBINSON AND ELIZABETH EVANS ROBINSON in the adjudication entitled "In the Matter of the Determination of The Rights of the Various Claimants to the Water of Indian Creek Stream System in Plumas County, Decree No. 4185 California, Superior Court Plumas County", dated December 19, 1950, as it has or may be amended including the so called "Surplus Class" rights from the flow of Hungry Creek stored in Taylor Lake and all implied or express easements for the conveyance of water from and including Diversion 36, as described in the above referenced Decree No 4185; (ii) that certain License for Diversion and Use of Water License No. 9165, Application No. 12844, Permit No. 7617 issued by the State of California-The Resources Agency-State Water Resources Control Board ("Water Resources Board"), recorded in the Plumas County California Records on March 16, 1970 in Volume 193, Page 232; (iii) that certain License for Diversion and Use of Water License No. 2223, Application No. 8460, Permit No. 4682 issued by the Water Resources Board; and (iv) all hereditaments, easements, incidents and appurtenances thereto and all of Grantor's interest in all oil, gas, hydrocarbons and minerals, and all surface and subsurface rights, and all hereditaments, easements, incidents and appurtenances thereto. Nothing herein is intended nor shall it be construed as in any way severing any water rights, including riparian rights, that may exist on either the above-described lands or Grantor's remaining lands as more particularly described on Exhibit B attached hereto and incorporated here by this reference ("Grantor's Remaining")

Lands"). The water rights associated with the Grantor's Remaining Lands as well as the water rights on the above-described lands are intended to remain the same as they would be absent the grant contained in this Grant Deed. Grantor transfers, assigns and conveys to Grantee all of those certain improvements, fixtures and other personal property associated with the water system located on or appurtenant to the real property. Together with easements for pedestrian and vehicular ingress and egress on existing roads over or appurtenant to Grantor's Remaining Lands; provided, however, that said easements (i) shall be non-exclusive; (ii) shall be for the purpose of providing pedestrian and vehicular access from the existing county road to the above-described lands being acquired by Grantee, and for no other purpose whatsoever; (iii) shall be for the benefit of the real property being acquired by Grantee only; and (iv) shall not obligate Grantor to maintain, repair or improve any existing roads.

This Grant is subject to: (i) all applicable laws, ordinances, rules, regulations, and permits affecting the Property or governing the use thereof; (ii) all taxes and other assessments; (iii) all easements, rights of way, encumbrances, liens, covenants, conditions, restrictions, obligations, and other matters of record; (iv) all matters that would be disclosed by a survey or physical inspection of the Property; and (v) Grantor's reserved right to use water in Taylor Lake in place (in situm) for recreation and aesthetic purposes.

23 **I. PETITION**

24 Petitioners, GONZALO GONZALEZ and EMELIA GALAVIZ deGONZALEZ (hereinafter
25 "GONZALEZ"), Successor in Interest to a portion of those water rights held by J. LaRue Robinson
26 and Elizabeth Evans Robinson (hereafter "ROBINSON"), hereby petition this court for amendment of
27 the Decree entered on December 19, 1950, by the Honorable Ben V. Curler, (hereafter Decree No.
28 4185) and by said petition request:

1. **The addition of a movable point of diversion within Parcel No. 008-160-24 along
Indian Creek in connection with water rights held by Successor in Interest GONZALEZ.**

1 **II. INTRODUCTION**

2
3 GONZALEZ recently purchased two parcels of property adjacent to Indian Creek. As such,
4 GONZALEZ is entitled to use a certain portion of the waters of Indian Creek pursuant to Water Decree
5 No. 4185 and more fully described below. This property (approximately 72.5 acres) comprises
6 approximately 20% of what used to be a larger, contiguous ranch consisting of approximately 362.9
7 acres.

8 GONZALEZ purchased this property with intention of creating an organic vegetable farm.
9 Although he has access to the waters of Indian Creek, the current Point of Diversion as prescribed by
10 Decree No. 4185 is approximately 2.5 miles away from his farm. There is a ditch system currently in
11 place that apparently was originally designed by GONZALEZ' predecessor to bring the water to the
12 predecessor's contiguous ranch. Given the ditch's current poor condition and distance over which the
13 water must travel, it is likely that GONZALEZ' water would evaporate or leak into the ground before
14 it ever reached his property. The installation of a piping system to carry the water over the 2.5 miles to
15 his property would be cost prohibitive.

16 To resolve the problem, GONZALEZ proposes to add an additional point of diversion along a
17 stretch of the subject property that is directly adjacent to Indian Creek. A water measuring device
18 would be installed at this new point of diversion to insure compliance with the appropriate water
19 allocations. The requested point of diversion would be movable along the course of the streambed but
20 within GONZALEZ' property. This would allow GONZALEZ flexibility when ultimately locating the
21 exact point of diversion along his property.

22
23 **III. PROJECT DESCRIPTION**

24
25 GONZALEZ own two parcels of property, APN 008-160-23 and APN 008-160-24, and the
26 accompanying water rights, said parcels being situated on what is currently known as the Heart-K
27 Ranch in Genesee Valley, Plumas County. See parcels highlighted on the Water Resources Map
28 attached hereto as **Exhibit A**. Both parcels comprise a total of approximately 72.5 acres; this is a

1 portion of the 362.9 acres of lands previously owned by ROBINSON. See page 51 of Schedule 1 of
2 Decree 4185 attached hereto as exhibit B. As owner and successor and interest to ROBINSON, and
3 pursuant to Decree No. 4185, GONZALEZ is entitled to a certain percentage of the waters of Indian
4 Creek. This amount is stated with specificity in Decree No. 4185, the following is an approximation of
5 the volume of GONZALEZ' water rights to Indian Creek¹:

6
7 **1.56 Cubic Feet per Second of water from Indian Creek.**

8 [Computation: Page 75 of Decree No. 4185 (attached hereto as Exhibit C) allocates to
9 ROBINSON 5.28 CFS of water rights to Indian Creek in connection with ROBINSON's 362.9
10 acres. GONZALEZ owns 72.5 acres of land formerly owned by ROBINSON, or 19.97% of
11 that land. Accordingly, GONZALEZ is entitled to 19.97% of 5.28 CFS, or 1.056 CFS]

12 **40 Acre-Foot of water from Taylor Lake.**

13 [Computation: Page 26, paragraph 48 of Decree No. 4185 (attached as Exhibit D) provides 200
14 acre-foot of water from Taylor Lake for ROBINSON. 19.97% of 200 acre-feet = 40 acre-foot]

15 Decree No. 4185, Schedule 2, sets forth the location of the point of diversion for GONZALEZ'
16 property. See page 58 of the Decree attached hereto as Exhibit E. That point is known as Point of
17 Diversion No. 36, and is depicted in Exhibit A. A distance of approximately 2.5 miles separates Point
18 36 and the area over which GONZALEZ intends to make use of the water.

19 By the filing of this petition, GONZALEZ seeks to add an additional point of diversion from
20 Indian Creek. Without the additional point of diversion, GONZALEZ would be required to transport
21 the water via an existing open ditch approximately 2.5 miles, over property not owned by
22 GONZALEZ. Due to the long distance, climate and dilapidated condition of the ditch², most of the
23 water would evaporate or soak into the dirt before it reached GONZALEZ' property.

24 The proposed location of the movable point of diversion is located immediately adjacent to or
25 within the boundaries of the GONZALEZ property, parcel number 008-160-24. GONZALEZ will

26 _____
27 ¹ As stated herein, GONZALEZ does not seek to change the amount or volume of water rights allotted to him by way of
28 this petition and therefore does not intend that this description of the volume of water rights owned by GONZALEZ to be
interpreted to be anything more than an approximation. In no event can it be used to limit the volume of water to be
beneficially used by GONZALEZ.

1 install a pump and aluminum piping system to transport the water to the area in which GONZALEZ
2 intends to water his crops. This distance will be less than one half of a mile. GONZALEZ will install
3 a water-measuring device at this point of diversion that will instantaneously measure and totalize the
4 amount of water being diverted. This metering device is common required by the Watermaster and
5 measures real time flow and totalized use.

6 The granting of this petition will allow GONZALEZ to complete his plan to conduct organic
7 farming on his lands. The subject land was not being utilized as farmland when GONZALEZ
8 purchased it in February of 2003. GONZALEZ has begun the process of converting the land by
9 planting green manure and putting nitrogen into the soil. The organic farm will produce a diverse
10 variety of vegetables.

11 GONZALEZ plans to use the additional point of diversion exclusively, but does not wish to
12 abandon the existing point of diversion in the event some future unforeseen circumstance would
13 prohibit him from utilizing the additional, movable point of diversion. GONZALEZ requests that the
14 additional point of diversion be movable because the exact point of diversion within Parcel No. 008-
15 160-24 has yet to be determined. It is likely that some amount of hands-on positioning of the pump
16 and piping system will be required before the optimal point of the diversion can be located.

17 GONZALEZ is not requesting any expansion of the amount of water rights currently allotted to
18 him pursuant to Decree No. 4185. The pump at the proposed additional point of diversion will be
19 fitted with the above-described water measuring device as prescribed and approved by the
20 Watermaster.

21 The creation of this additional point of diversion will make for the efficient and beneficial use
22 of the waters of Indian Creek. It would eliminate a wasteful and costly attempt to transport waters to
23 the GONZALEZ property from Point 36 by significantly decreasing the distance the water will travel.
24 Waste will be further decreased by the use of enclosed pipes as opposed to an open ditch. Under no
25 circumstances will GONZALEZ use more than is allotted to him under Decree No. 4185.

26
27
28 ² The ditch has gaps, breaks and breaches in it that allow the water to flow onto surrounding property. Certain sections of
the ditch contain pipeline. The pipeline is riddled with leaks, which further allow water to escape onto surrounding
property.

1 As owner of the subject lands and accompanying water rights, GONZALEZ respectfully
2 requests an amendment of Decree 4185 creating an additional, movable point of diversion.
3 GONZALEZ is not requesting additional amounts of water, nor is he requesting a change of place or
4 use, but simply a change in the point of diversion.

5
6 **IV. LEGAL ANALYSIS**

7
8 In most cases involving appropriative water rights, the user must petition the State Water
9 Resources Control Board (hereinafter "Board") to obtain a change in point of diversion, or place or
10 purpose of use. (Water Code § 1701.) Before permission to make such a change is granted, the
11 petitioner shall establish, to the satisfaction of the Board, that the change will not operate to the injury
12 of any legal user of the water involved. (Water Code § 1702.) After filing the petition for permission
13 to make such a change, the petitioner, if required by the Board, shall give or publish notice of the
14 petition according to the Board's determination; in all cases notifying the Department of Fish and
15 Game in writing of the proposed change. (Water Code § 1703.) The Board may order a hearing
16 regarding the proposed change, whether or not a protest is filed with the Board. (Water Code § 1704.)
17 After the hearing, the Board shall grant or refuse, as the facts warrant, permission to change the point
18 of diversion, place of use, or purpose of use. (Water Code § 1705.)

19 However, in the present case the court retains continuing jurisdiction "of the parties to this
20 proceeding, and of the subject matter thereof, upon application of any party hereto, or successors in
21 interest, or upon its own motion, to review this decree and change or modify the same as the interest of
22 justice may require." (See Decree p.82, paragraph 51.) The retention of jurisdiction to meet future
23 problems is an appropriate exercise of equitable jurisdiction in litigation over water rights, particularly
24 when the adjustment of substantial public interests is involved. City of Los Angeles v. City of
25 Glendale, (1943) 23 Cal. 2d 68,81. The trial court may, by appropriate provisions in its judgment,
26 retain jurisdiction over the case "so that when a riparian claims the need for water, the right to which
27 was awarded him under such a declaratory decree, the trial court may determine whether the proposed
28 new use, under all the circumstances, is a reasonable beneficial use." Tulare Dist. v. Lindsay-

1 Strathmore Dist., (1935) 3 Cal. 2d 489, 525. The Board has no authority to approve the petition for
2 addition of a movable point of diversion because such a change requires a modification of the decree.

3 The petition process to modify the exercise of rights under a similar decree is described by the
4 court in *San Gregorio Creek Adjudication (1993) Decree No. 355792*. The water rights holder shall
5 file a petition with the court to approve the modification describing the proposed modification with
6 specificity, including the existing and proposed points of diversion, places of use and purposes of use.
7 (*Id.*, p. 28.) At the time the petition is filed with the court, the petitioner shall serve a copy of the
8 petition for the proposed modification on all persons with point of diversion or places of use below the
9 most upstream point of diversion belonging to petitioner, as well as the California Department of Fish
10 and Game and the Department of Parks and Recreation. (*Id.*) The parties shall use the Watermaster
11 mailing list and shall also publish notice of the petition in the local newspapers of general circulation.
12 (*Id.*, p. 29.) The notice and names and addresses of the persons sent the petition shall be filed with the
13 court and mailed to the Watermaster. The notice shall state that objections should be filed with the
14 court and mailed to the Watermaster and the petitioner within 30 days of service of the petition. (*Id.*)
15 After the expiration of the 30-day objection period, the watermaster shall investigate the proposed
16 modification and file a written report of the investigation. (*Id.*) The report will summarize any
17 objections and advise the court of the following: which objections (if any) are, in the Watermaster's
18 opinion, without merit, and whether any objections can be resolved by conditions attached to the
19 modification; and whether the proposed modification will, in the opinion of the Watermaster, injure
20 any legal user of water or unreasonably affect fish, wildlife, or other instream beneficial uses.

21
22 WHEREFORE, for the foregoing reasons, Petitioner and Successor in Interest GONZALEZ
23 respectfully request the court make the following Orders:

- 24
25 1. Contingent upon the expiration of the 30-day objection period and resolution of any
26 issues in the Watermaster's investigative written report, amend the Decree entered on
27 December 19, 1950, by the Honorable Ben V. Curler, to allow for the following:

NOTICE OF PETITION TO AMEND WATER DECREE

Notice is hereby given that on or about January 22, 2004, petitioners and water rights holder Gonzalo Gonzalez and Emelia Galaviz deGonzalez submitted for filing a Petition For Amendment Of Decree To Add a Movable Point of Diversion Along Indian Creek with the Superior Court of the State of California, Plumas County. The address of the court is as follows:

Superior Court of California, Plumas County
520 Main Street, Rm. 104
Quincy, California 95971

Said petition seeks to modify water rights to Indian Creek granted to petitioners, successors in interest, in the aforementioned decree, in order to add a moveable point of diversion regarding the use of these water rights. Petitioners do not seek any increase in the amounts of water allocated to them by the prior adjudication.

Objections to the petition should be filed with the Plumas County Superior Court, and mailed to petitioners' attorney (Dun & Martinek LLP) and the Watermaster within 28 days of the date of first publication of this notice. Gov't Code §6064. The first date this notice will be published is January 28, 2004.

23 I, Randall H Davis, declare:

24 1. I am a partner at the law firm of Dun & Martinek and am licensed to practice law in the
25 State of California. Dun & Martinek represents Gonzalo Gonzalez and Emelia Galaviz deGonzalez
26 ("Gonzalez") in this matter.

27 2. I am informed and believe that in February of 2003, Gonzalez purchased land in Plumas
28 County for the purpose of starting an organic vegetable farm. The exact location of the property is
described in the petition to amend decree no. 4185 filed herewith. I am informed and believe that the
"dry season" starts in March of 2004, and from this time forward and until the following winter,
Gonzalez will need to exercise his water rights to Indian Creek and Taylor Lake. However, the point
of diversion as prescribed by Decree No. 4185 is over 2 miles away from Gonzalez's farmland. I am

1 informed that the ditch in which the water must travel these 2 miles is in such a dilapidated state that
2 any water diverted at the prescribed location would evaporate or escape before it reaches Gonzalez's
3 property. The petition requests the addition of a new point of diversion, much closer to the subject
4 farmland. It is thusly important that the Watermaster be appointed and the hearing on the
5 accompanying petition be heard as soon as possible in order to avoid a situation where Gonzalez has
6 no water for his crops.

7 3. I am informed and believe that there is a sense of some urgency that this matter be
8 addressed prior to the dry season. Accordingly, Gonzalez is requesting that the Watermaster be
9 appointed by the court now to avoid any delay that would come with appointing the Watermaster at a
10 later date. I have spoken to the Watermaster, Curtis Levine, about this matter and he is presently
11 familiar with Gonzalez's proposed additional moveable point of diversion. Mr. Levine will need time
12 to gather additional information and prepare a report for the court regarding any impact Gonzalez's
13 proposed point of diversion may have on other water rights holders. Appointment of a Watermaster at
14 this time will not prejudice any interested parties in that any such party will still have full notice of this
15 proceeding and the full time period to make any objection.

16 4. The setting of a review date at this time for March 3, 2004, also will not prejudice any
17 interested parties. Setting the review date will not prevent them from having full notice of this
18 proceeding and the full time period to make any objections, or otherwise impact their ability to be
19 heard in this matter. The setting of this date is necessary to avoid any delay in these proceedings. It
20 will allow Petitioner and the court to monitor the progress of the Watermaster and to quickly address
21 any objections to the Petition. A hearing date is also needed so that the date may be included in the
22 mailed and published notices that will be served soon.

23 I declare under penalty of perjury that the foregoing is true and correct.

21 I. PETITION

22 Petitioners, GONZALO GONZALEZ and EMELIA GALAVIZ deGONZALEZ (hereinafter
23 "GONZALEZ"), Successor in Interest to a portion of those water rights held by J. LaRue Robinson
24 and Elizabeth Evans Robinson (hereafter "ROBINSON"), hereby petition this court for amendment of
25 the Decree entered on December 19, 1950, by the Honorable Ben V. Curler, (hereafter Decree No.
26 4185) and by said petition request:

27 1. The addition of a movable point of diversion within Parcel No. 008-160-24 along
28 Indian Creek in connection with water rights held by Successor in Interest GONZALEZ.

1 II. INTRODUCTION

2
3 GONZALEZ recently purchased two parcels of property adjacent to Indian Creek. As such,
4 GONZALEZ is entitled to use a certain portion of the waters of Indian Creek pursuant to Water Decree
5 No. 4185 and more fully described below. This property (approximately 72.5 acres) comprises
6 approximately 20% of what used to be a larger, contiguous ranch consisting of approximately 362.9
7 acres.

8 GONZALEZ purchased this property with intention of creating an organic vegetable farm.
9 Although he has access to the waters of Indian Creek, the current Point of Diversion as prescribed by
10 Decree No. 4185 is approximately 2.5 miles away from his farm. There is a ditch system currently in
11 place that apparently was originally designed by GONZALEZ' predecessor to bring the water to the
12 predecessor's contiguous ranch. Given the ditch's current poor condition and distance over which the
13 water must travel, it is likely that GONZALEZ' water would evaporate or leak into the ground before
14 it ever reached his property. The installation of a piping system to carry the water over the 2.5 miles to
15 his property would be cost prohibitive.

16 To resolve the problem, GONZALEZ proposes to add an additional point of diversion along a
17 stretch of the subject property that is directly adjacent to Indian Creek. A water measuring device
18 would be installed at this new point of diversion to insure compliance with the appropriate water
19 allocations. The requested point of diversion would be movable along the course of the streambed but
20 within GONZALEZ' property. This would allow GONZALEZ flexibility when ultimately locating the
21 exact point of diversion along his property.

22
23 III. PROJECT DESCRIPTION

24
25 GONZALEZ own two parcels of property, APN C08-160-23 and APN 008-160-24, and the
26 accompanying water rights, said parcels being situated on what is currently known as the Heart-K
27 Ranch in Genesee Valley, Plumas County. See parcels highlighted on the Water Resources Map
28 attached hereto as Exhibit A. Both parcels comprise a total of approximately 72.5 acres; this is a

1 portion of the 362.9 acres of lands previously owned by ROBINSON. See page 51 of Schedule 1 of
2 Decree 4185 attached hereto as exhibit B. As owner and successor and interest to ROBINSON, and
3 pursuant to Decree No. 4185, GONZALEZ is entitled to a certain percentage of the waters of Indian
4 Creek. This amount is stated with specificity in Decree No. 4185, the following is an approximation of
5 the volume of GONZALEZ' water rights to Indian Creek¹:

6
7 **1.056 Cubic Feet per Second of water from Indian Creek.**

8 [Computation: Page 75 of Decree No. 4185 (attached hereto as Exhibit C) allocates to
9 ROBINSON 5.28 CFS of water rights to Indian Creek in connection with ROBINSON's 362.9
10 acres. GONZALEZ owns 72.5 acres of land formerly owned by ROBINSON, or 19.97% of
11 that land. Accordingly, GONZALEZ is entitled to 19.97% of 5.28 CFS, or 1.056 CFS]

12 **40 Acre-Foot of water from Taylor Lake.**

13 [Computation: Page 26, paragraph 48 of Decree No. 4185 (attached as Exhibit D) provides 200
14 acre-foot of water from Taylor Lake for ROBINSON. 19.97% of 200 acre-feet = 40 acre-foot]

15 Decree No. 4185, Schedule 2, sets forth the location of the point of diversion for GONZALEZ'
16 property. See page 58 of the Decree attached hereto as Exhibit E. That point is known as Point of
17 Diversion No. 36, and is depicted in Exhibit A. A distance of approximately 2.5 miles separates Point
18 36 and the area over which GONZALEZ intends to make use of the water.

19 By the filing of this petition, GONZALEZ seeks to add an additional point of diversion from
20 Indian Creek. Without the additional point of diversion, GONZALEZ would be required to transport
21 the water via an existing open ditch approximately 2.5 miles, over property not owned by
22 GONZALEZ. Due to the long distance, climate and dilapidated condition of the ditch², most of the
23 water would evaporate or soak into the dirt before it reached GONZALEZ' property.

24 The proposed location of the movable point of diversion is located immediately adjacent to or
25 within the boundaries of the GONZALEZ property, parcel number 008-160-24. GONZALEZ will

26 ¹ As stated herein, GONZALEZ does not seek to change the amount or volume of water rights allotted to him by way of
27 this petition and therefore does not intend that this description of the volume of water rights owned by GONZALEZ to be
28 interpreted to be anything more than an approximation. In no event can it be used to limit the volume of water to be
beneficially used by GONZALEZ.

1 install a pump and aluminum piping system to transport the water to the area in which GONZALEZ
2 intends to water his crops. This distance will be less than one half of a mile. GONZALEZ will install
3 a water-measuring device at this point of diversion that will instantaneously measure and totalize the
4 amount of water being diverted. This metering device is common required by the Watermaster and
5 measures real time flow and totalized use.

6 The granting of this petition will allow GONZALEZ to complete his plan to conduct organic
7 farming on his lands. The subject land was not being utilized as farmland when GONZALEZ
8 purchased it in February of 2003. GONZALEZ has begun the process of converting the land by
9 planting green manure and putting nitrogen into the soil. The organic farm will produce a diverse
10 variety of vegetables.

11 GONZALEZ plans to use the additional point of diversion exclusively, but does not wish to
12 abandon the existing point of diversion in the event some future unforeseen circumstance would
13 prohibit him from utilizing the additional, movable point of diversion. GONZALEZ requests that the
14 additional point of diversion be movable because the exact point of diversion within Parcel No. 008-
15 160-24 has yet to be determined. It is likely that some amount of hands-on positioning of the pump
16 and piping system will be required before the optimal point of the diversion can be located.

17 GONZALEZ is not requesting any expansion of the amount of water rights currently allotted to
18 him pursuant to Decree No. 4185. The pump at the proposed additional point of diversion will be
19 fitted with the above-described water measuring device as prescribed and approved by the
20 Watermaster.

21 The creation of this additional point of diversion will make for the efficient and beneficial use
22 of the waters of Indian Creek. It would eliminate a wasteful and costly attempt to transport waters to
23 the GONZALEZ property from Point 36 by significantly decreasing the distance the water will travel.
24 Waste will be further decreased by the use of enclosed pipes as opposed to an open ditch. Under no
25 circumstances will GONZALEZ use more than is allotted to him under Decree No. 4185.

26
27
28 ² The ditch has gaps, breaks and breaches in it that allow the water to flow onto surrounding property. Certain sections of
the ditch contain pipeline. The pipeline is riddled with leaks, which further allow water to escape onto surrounding
property

1 As owner of the subject lands and accompanying water rights, GONZALEZ respectfully
2 requests an amendment of Decree 4185 creating an additional, movable point of diversion.
3 GONZALEZ is not requesting additional amounts of water, nor is he requesting a change of place or
4 use, but simply a change in the point of diversion.
5

6 IV. LEGAL ANALYSIS

7

8 In most cases involving appropriative water rights, the user must petition the State Water
9 Resources Control Board (hereinafter "Board") to obtain a change in point of diversion, or place or
10 purpose of use. (Water Code § 1701.) Before permission to make such a change is granted, the
11 petitioner shall establish, to the satisfaction of the Board, that the change will not operate to the injury
12 of any legal user of the water involved. (Water Code § 1702.) After filing the petition for permission
13 to make such a change, the petitioner, if required by the Board, shall give or publish notice of the
14 petition according to the Board's determination; in all cases notifying the Department of Fish and
15 Game in writing of the proposed change. (Water Code § 1703.) The Board may order a hearing
16 regarding the proposed change, whether or not a protest is filed with the Board. (Water Code § 1704.)
17 After the hearing, the Board shall grant or refuse, as the facts warrant, permission to change the point
18 of diversion, place of use, or purpose of use. (Water Code § 1705.)

19 However, in the present case the court retains continuing jurisdiction "of the parties to this
20 proceeding, and of the subject matter thereof, upon application of any party hereto, or successors in
21 interest, or upon its own motion, to review this decree and change or modify the same as the interest of
22 justice may require." (See Decree p.82, paragraph 51.) The retention of jurisdiction to meet future
23 problems is an appropriate exercise of equitable jurisdiction in litigation over water rights, particularly
24 when the adjustment of substantial public interests is involved. City of Los Angeles v. City of
25 Glendale. (1943) 23 Cal. 2d 68,81. The trial court may, by appropriate provisions in its judgment,
26 retain jurisdiction over the case "so that when a riparian claims the need for water, the right to which
27 was awarded him under such a declaratory decree, the trial court may determine whether the proposed
28 new use, under all the circumstances, is a reasonable beneficial use." Tulare Dist. v. Lindsay-

1 Strathmore Dist., (1935) 3 Cal. 2d 489, 525. The Board has no authority to approve the petition for
2 addition of a movable point of diversion because such a change requires a modification of the decree.

3 The petition process to modify the exercise of rights under a similar decree is described by the
4 court in *San Gregorio Creek Adjudication (1993) Decree No. 355792*. The water rights holder shall
5 file a petition with the court to approve the modification describing the proposed modification with
6 specificity, including the existing and proposed points of diversion, places of use and purposes of use.
7 (*Id.*, p. 28.) At the time the petition is filed with the court, the petitioner shall serve a copy of the
8 petition for the proposed modification on all persons with point of diversion or places of use below the
9 most upstream point of diversion belonging to petitioner, as well as the California Department of Fish
10 and Game and the Department of Parks and Recreation. (*Id.*) The parties shall use the Watermaster
11 mailing list and shall also publish notice of the petition in the local newspapers of general circulation.
12 (*Id.*, p. 29.) The notice and names and addresses of the persons sent the petition shall be filed with the
13 court and mailed to the Watermaster. The notice shall state that objections should be filed with the
14 court and mailed to the Watermaster and the petitioner within 30 days of service of the petition. (*Id.*)
15 After the expiration of the 30-day objection period, the watermaster shall investigate the proposed
16 modification and file a written report of the investigation. (*Id.*) The report will summarize any
17 objections and advise the court of the following: which objections (if any) are, in the Watermaster's
18 opinion, without merit, and whether any objections can be resolved by conditions attached to the
19 modification; and whether the proposed modification will, in the opinion of the Watermaster, injure
20 any legal user of water or unreasonably affect fish, wildlife, or other instream beneficial uses.

21
22 WHEREFORE, for the foregoing reasons, Petitioner and Successor in Interest GONZALEZ
23 respectfully request the court make the following Orders:

- 4
5 1. Contingent upon the expiration of the 30-day objection period and resolution of any
6 issues in the Watermaster's investigative written report, amend the Decree entered on
7 December 19, 1950, by the Honorable Ben V. Curler, to allow for the following:
8

- 1 (a) The creation of an additional, movable point of diversion of water from Indian
2 Creek, said movable point of diversion to be located within the boundaries of
3 Parcel No. 008-160-24 along Indian Creek, to be used for the benefit of the
4 owners of Parcels No.'s 008-160-23 and 008-160-24, currently Successor in
5 Interest GONZALEZ.

STREAMBED ALTERATION AGREEMENT
EPIMS NOTIFICATION No. PLU-45875-R2
INDIAN CREEK

FEATHER RIVER LAND TRUST
HEART K RANCH POINT OF DIVERSION

This Streambed Alteration Agreement (Agreement) is entered into between the California Department of Fish and Wildlife (CDFW) and the Feather River Land Trust (Permittee) as represented by Nils Lunder.

RECITALS

WHEREAS, pursuant to Fish and Game Code section 1602, Permittee notified CDFW on February 2, 2024 that Permittee intends to complete the project described herein.

WHEREAS, pursuant to Fish and Game Code section 1603, CDFW has determined that the project could substantially adversely affect existing fish or wildlife resources and has included measures in this Agreement necessary to protect those resources.

WHEREAS, Permittee has reviewed this Agreement and accepts its terms and conditions, including the measures to protect fish and wildlife resources.

NOW THEREFORE, Permittee agrees to complete the project in accordance with this Agreement.

PROJECT LOCATION

The project is located in Indian Creek, in the County of Plumas, State of California; Latitude 40.06569° North, Longitude 120.692268° West, 11046 Genesee Road, Taylorsville, CA 95978 (**Exhibit A**).

PROJECT DESCRIPTION

The project consists of abandonment of an existing point of diversion and associated diversion structures on Indian Creek, and relocation of the point of diversion onto the ranch property. The new diversion would be operated annually on an as-needed basis to store irrigation water in an existing stock pond and is limited to the following activities:

- 1) Abandonment of original diversion structure on Indian Creek.
- 2) Placement of a hose attached to a portable, trailer mounted, water pump in a pool present in Indian Creek where it crosses Heart K Ranch Property. The pump will be either an electric or diesel-powered pump.

- 3) Minor trimming of riparian vegetation in the form of willow sprouts to allow access to the creek for the diversion pump.
- 4) Diversion of water at a rate not to exceed four-point-twenty-two (4.22) cubic feet per second (cfs) from Indian Creek as identified in the Appropriative Water Right for Heart K Ranch with storage of the water in an off-stream reservoir to be used as needed for irrigation purposes. The total amount diverted per year would not exceed two hundred-ninety (290) acre-feet of water.

No in-stream placement of a pump or other equipment, outside of the extraction hose, will be required for the above-mentioned activities.

Exhibit B shows the project plans.

PROJECT IMPACTS

Existing fish or wildlife resources the project could substantially adversely affect include: resident fish species, amphibians, and other aquatic and terrestrial plant and wildlife species including nesting migratory neo-tropical songbirds.

The adverse effects the project could have on the fish or wildlife resources identified above include:

Temporary disturbance of nesting, and shelter habitat; and disturbance to wildlife due to increased human activity, noise, and vibrations from pumping water; direct take of fish and other aquatic species through entrainment into the diversion hose during active pumping. Mortality or injury to individual plants and animals caused by project activities or decreased viability due to diversion of water from this reach of Indian Creek which could result in significantly reduced flows and resulting low dissolved oxygen levels and increased water temperatures downstream.

MEASURES TO PROTECT FISH AND WILDLIFE RESOURCES

1. Administrative Measures

Permittee shall meet each administrative requirement described below.

- 1.1 Documentation at Project Site. Permittee shall make this Agreement, any extensions and amendments to this Agreement, and all related notification materials and California Environmental Quality Act (CEQA) documents, readily available at the project site at all times and shall be presented to CDFW personnel, or personnel from another state, federal, or local agency upon request.
- 1.2 Providing Agreement to Persons at Project Site. Permittee shall provide copies of this Agreement and any extensions and amendments to this Agreement to all persons who will be working on the project at the project site on behalf of Permittee, including but not limited to contractors, subcontractors, inspectors, and monitors.

- 1.3 Notification of Conflicting Provisions. Permittee shall notify CDFW if Permittee determines or learns that a provision in this Agreement might conflict with a provision imposed on the project by another local, state, or federal agency. In that event, CDFW shall work with the Permittee to resolve any conflict.
- 1.4 Project Site Entry. Permittee agrees that CDFW personnel may enter the project site at any time to verify compliance with this Agreement.
- 1.5 No Trespass. To the extent that any provisions of this Agreement provide for activities that require Permittee to traverse another owner's property, such provisions are agreed to with the understanding that the Permittee possesses the legal right to so traverse. In the absence of such right, any such provision is void.
- 1.6 Notification of Project Modification. Permittee agrees to notify CDFW of any modifications made to the project plans submitted to CDFW.
- 1.7 Change of Conditions and Need to Cease Operations. If conditions arise, or change, in such a manner as to be considered deleterious to the stream or wildlife, operations shall cease until corrective measures approved by CDFW are taken.
- 1.8 Does Not Authorize "Take." This Agreement does not authorize "take" of any California Endangered Species Act (CESA) listed species. Take is defined in Fish and Game Code section 86, as hunt, pursue, catch, capture or kill or attempt to hunt, pursue, catch, capture, or kill. If there is potential for take of any listed species to occur, Permittee shall consult with CDFW and demonstrate compliance with CESA.

2. Avoidance and Minimization Measures

To avoid or minimize adverse impacts to fish and wildlife resources identified above, Permittee shall implement each measure listed below.

- 2.1 Work Period. Project activities covered under this Agreement shall be confined to the period between January first (01/01) and December thirty-first (12/31) at a rate of zero-point six two (0.62) cubic feet per second (cfs) with an increase in pumping between March first (3/01) and October thirty-first (10/31) of each calendar year by up to three-point six (3.6) cfs during the term of this Agreement. *Revegetation, restoration, and erosion control work located outside of flowing water is not confined to this time period.*
- 2.2 Work Period Modification. Under this Agreement, diversion of water from Indian Creek cannot be extended outside of the diversion date range as specified in Permittee's water rights for Indian Creek and approved by the court appointed Water Master.
- 2.3 Vegetation Removal. Disturbance or removal of vegetation shall be kept to the minimum necessary to complete project related activities. Except for tree removal

already described in the project description, no native trees with a trunk diameter at breast height (DBH) in excess of four (4) inches shall be removed or damaged without prior consultation and approval of a CDFW representative. Where native trees or woody riparian vegetation split into several trunks close to ground level, the DBH shall be measured for each trunk and calculated as one tree. Vegetation that will not be removed by the project shall be marked for protection and may only be trimmed with hand tools to the extent necessary to gain access to the work sites.

- 2.4 Vegetation Removal Methods. Hand tools (e.g., trimmer, chain saw, etc.) shall be used to trim vegetation to the extent necessary to gain access to the work site(s); larger equipment shall not be used for vegetation removal unless already described in the project description.
- 2.5 Designated Biologist. At least thirty (30) business days before initiating ground- or vegetation-disturbing activities, Permittee shall submit to CDFW in writing the name, qualifications, business address, and contact information for a biological monitor (Designated Biologist). Permittee shall obtain CDFW's written approval of the Designated Biologist prior to the commencement of project activities. The Designated Biologist shall be knowledgeable and experienced in the biology and natural history of local fish and wildlife resources present at the project site and have the necessary handling permits. The Designated Biologist shall be responsible for monitoring all project activities, including construction and any ground- or vegetation-disturbing activities in areas subject to this Agreement. The Designated Biologist shall be responsible for observing bird activity and any newly active nests. Permittee shall not enter into any agreement or contract of any kind, including but not limited to non-disclosure agreements and confidentiality agreements, with the Designated Biologist that prohibit or impede open communication with CDFW, including but not limited to providing CDFW staff with the results of any surveys, reports, or studies or notifying CDFW of any non-compliance or take. Permittee shall notify CDFW in writing if a substitute Designated Biologist is selected or identified at any time during the term of this Agreement.

Biological Resources

- 2.6 Leave Wildlife Unharmed. Wildlife shall be allowed to leave the project area unharmed.
- 2.7 Special-Status Species Encountered During Work. If Permittee encounters any special-status species during project activities, work shall be suspended, CDFW notified, and conservation measures shall be developed in agreement with CDFW prior to re-initiating the activity. If during project activities, Permittee encounters any species listed pursuant to the CESA, work shall be suspended, and CDFW notified. Work may not re-initiate until the Permittee has consulted with CDFW and can demonstrate compliance with CESA.

- 2.8 Nesting Bird Survey. If project-related activities are scheduled between February first (02/01) to August thirty-first (08/31) (the typical nesting season), a focused survey for nests shall be conducted by a Designated Biologist within five (5) calendar days prior to the beginning of Project-related activities annually. The Designated Biologist shall survey a minimum radius of 500-feet for migratory birds and 1/2-mile for raptors around the Project area that can be accessed by Permittee. The results of the survey shall be provided to CDFW upon completion. If no active nests are found, project activities may proceed as scheduled.
- 2.8.1 Active Nests. If an active nest is found, active nests should be avoided, and a no disturbance or destruction buffer shall be determined and established by a Designated Biologist. The buffer shall be kept in place until after the breeding nesting season or the Designated Biologist confirms the young have fledged, are foraging independently, and the nest is no longer active for the season. The extent of these buffers shall be determined by the Designated Biologist and will depend on the species present, the level of noise or construction disturbance, line of sight between the nest and the disturbance, ambient levels of noise and other disturbances, and other topographical or artificial barriers.
- 2.8.2 Project Delay. If a lapse in project-related work of fourteen (14) calendar days or longer occurs, the Designated Biologist shall complete another focused survey before Project work can be reinitiated.
- 2.8.3 Permittee Responsibility. It is the Permittee's responsibility to comply with Fish and Game Code Sections 3503, 3503.5, and 3513, regardless of the time of year. This Agreement does not authorize take of birds, their nests, or their eggs.
- 2.9 Invasive Species. Permittee shall conduct project activities in a manner that prevents the introduction, transfer, and spread of aquatic, riparian, and terrestrial invasive species from one work site and/or water body to another. Prior to entering the project area, Permittee shall inspect equipment for invasive species and, if any signs of invasive species are found, the equipment shall be cleaned to remove those species. All visible soil/mud, plant materials, and animal remnants on equipment will be removed prior to entering and exiting the work site and/or between each use in different water bodies. Permittee shall notify CDFW immediately if an invasive species not previously known to occur within the work site is discovered during work activities by contacting CDFW's Invasive Species Program by email at Invasives@wildlife.ca.gov.

Revegetation and Restoration

- 2.10 Seeding. Permittee shall restore all exposed/disturbed areas and access points within the project area, by seeding with a native seed mix of known genetic origin whose original stock seed was collected from the Sierra Nevada mountain region, unless otherwise agreed upon with CDFW. Revegetation shall be completed in the

fall before the start of the rainy season and as soon as possible after project activities. Seeded areas shall be covered with broadcast straw, mulch, and/or erosion control blankets.

- 2.11 Native Plant Materials. Revegetation shall include only local plant materials native to the project area, unless otherwise approved by CDFW in writing.
- 2.12 Prohibited Plant Species. Permittee shall not plant, seed or otherwise introduce invasive non-native plant species. Prohibited invasive non-native plant species include those identified in the California Invasive Plant Council's database, which is accessible at: <http://www.cal-ipc.org>.
- 2.13 Stream Materials. Rock, gravel, and/or other materials shall not be imported to, taken from or moved between watercourses except as otherwise addressed in this Agreement.

Erosion Control/Stabilization

- 2.14 Erosion Control. Permittee shall actively implement best management practices (BMPs) to minimize turbidity and siltation and prevent erosion and the discharge of sediment where it may pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat during project activities. Precautions shall include, but are not limited to: pre-project planning to identify site specific turbidity and siltation minimization measures; best management erosion control practices during project activity; and settling, filtering, or otherwise treating silty and turbid water prior to discharge into a stream or storm drain. This may require the placement of silt fencing, coir logs, coir rolls, straw bale dikes, or other siltation barriers so that silt and/or other deleterious materials are not allowed to pass to downstream reaches.
- 2.14.1 Monitoring. BMPs shall be monitored daily and repaired if necessary to ensure maximum erosion and sediment control.
- 2.14.2 Materials. All fiber rolls, straw wattles, and/or hay bales utilized within and adjacent to the project site shall be free of non-native plant materials. Fiber rolls or erosion control mesh shall be made of loose-weave mesh that is not fused at the intersections of the weave, such as jute, or coconut (coir) fiber, or other products without welded weaves. Products with plastic monofilament or cross joints in the netting that are bound/stitched (such as found in straw wattles/fiber rolls and some erosion control blankets), which may cause entrapment of wildlife, shall not be allowed. Permittee shall remove and dispose of all temporary BMPs and any related material upon completion of project activities.
- 2.14.3 Implementation. Passage of sediment beyond the sediment barrier(s) is prohibited. If any sediment barrier fails to retain sediment, corrective

measures shall be taken. The sediment barrier(s) shall be maintained in good operating condition throughout the construction period and the following rainy season. Maintenance includes, but is not limited to, removal of accumulated silt and/or replacement of damaged silt fencing, coir logs, coir rolls, and/or straw bale dikes. Upon the CDFW's determination that turbidity/siltation levels resulting from project-related activities constitute a threat to aquatic life, activities associated with the turbidity/siltation shall be halted until effective CDFW-approved control devices are installed or abatement procedures are initiated.

- 2.15 Prohibition Against Use of Plastic Netting in Erosion Control Measures. Permittee shall not use temporary or permanent erosion control devices containing plastic netting, including photo- or bio-degradable plastic netting. These items are commonly found in straw wattles (fiber rolls) and erosion control blankets.
- 2.16 Post Storm Event Inspection. After any storm event, Permittee shall inspect all sites scheduled to begin or continue construction within the next 72 hours. Corrective action for erosion and sedimentation shall be taken as needed. National Weather Service 72-hour weather forecasts shall be reviewed prior to the start of any phase of the project that may result in sediment runoff to the stream, and construction plans adjusted to meet this requirement. The National Weather Service forecast can be found at: <http://www.nws.noaa.gov>.

Avoid/Minimize Effects of Equipment

- 2.17 Heavy Equipment. No heavy equipment shall operate, or any excavation take place, in waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.18 Heavy Equipment Maintenance. Any equipment or vehicles driven and/or operated shall be checked and maintained daily to prevent leaks of materials that could be deleterious to aquatic and terrestrial life or riparian habitat. If maintenance or refueling of vehicles or equipment must occur on-site, Permittee shall use a designated area and/or a secondary containment, located away from drainage courses to prevent the runoff of storm water and the runoff of spills. Permittee shall place drip pans or absorbent materials under vehicles and equipment when not in use. Equipment shall be stored in areas that any possible contamination from the equipment would not pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.19 Equipment Maintenance and Fueling. No equipment maintenance or fueling shall take place where petroleum products or other pollutants from the equipment may pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.

- 2.20 Minimize Vehicle Parking. Vehicles may enter and exit the work area as necessary for project activities, but shall not be parked overnight within ten (10) feet of the drip line of any trees; nor shall vehicles be parked where mechanical fluid leaks may potentially pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.21 Staging and Storage Areas. Staging and storage areas for equipment, materials, fuels, lubricants, and solvents, shall be located where it may not pass into the waters of the state, the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.22 Building Material Storage. Project building material and/or project equipment shall not be placed where materials could pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat, or where they may cover aquatic or riparian vegetation.
- 2.23 Decontamination of Project Equipment. Permittee shall decontaminate all tools, waders and boots, and other equipment that will enter the water prior to entering and exiting the project site to avoid the introduction and transfer of organisms. Permittee shall decontaminate project gear and equipment that will enter the water by utilizing one of three methods: drying, using a hot water soak, or freezing, as appropriate to the type of gear or equipment. For all methods, Permittee shall begin the decontamination process by thoroughly scrubbing personal equipment, paying close attention to small crevices such as boot laces, seams, net corners, etc., with a stiff-bristled brush to remove all organisms. To decontaminate by drying, Permittee shall allow larger equipment to dry thoroughly (i.e., until there is a complete absence of water), preferably in the sun, for a minimum of 48 hours. To decontaminate using a hot water soak, Permittee shall immerse equipment in 140 degrees Fahrenheit or hotter water and soak for a minimum of 5 minutes. To decontaminate by freezing, Permittee shall place equipment in a freezer 32 degrees Fahrenheit or colder for a minimum of eight (8) hours. Repeat decontamination is required only if the equipment/clothing is removed from the site, used within a different waterbody, and returned to the project site.
- 2.24 Decontamination Sites. Permittee shall perform decontamination of vehicles, watercraft, and other project gear and equipment in a designated location where runoff can be contained and not allowed to pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.25 Stationary Equipment Leaks. Stationary equipment such as motors, pumps, generators, and welders shall be positioned over drip pans and secondary containment, as necessary. Stationary equipment shall have suitable containment to handle any spill/leak. Equipment shall be stored in areas that any possible contamination from the equipment would not pass into waters of the state (Fish &

G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.

Debris Materials and Waste

- 2.26 Remove Structures. Project-related structures and associated materials not designed to withstand high water flows or placed in seasonally dry portions of a stream or lake that could be washed downstream or could be deleterious to aquatic life, wildlife, or riparian habitat shall be moved to areas outside the floodplain before such flows occur.
- 2.27 No Dumping. Permittee and all contractors, subcontractors, and employees shall not dump any litter or project debris on the project site.
- 2.28 Remove Temporary Flagging, Fencing, and Barriers. Permittee shall remove all temporary flagging, fencing, and/or barriers from the project area and vicinity immediately upon annual completion of project activities.
- 2.29 Wash Water. Water containing mud, silt, or other pollutants from equipment washing or other activities, shall not be allowed to enter sensitive areas, or placed in locations where it may pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat.
- 2.30 Hazardous Materials. Debris, soil, silt, sand, rubbish, project waste, cement or concrete or washings thereof, asphalt, paint, oil or other petroleum products or any other substances which could be hazardous to aquatic life, or other organic or earthen material from project activities shall not be stored where it may pass into waters of the state (Fish & G. Code § 89.1), the stream bed, bank, or channel (including but not limited to dry, ponded, flowing, or wetland areas), drainages, lakes, or other sensitive habitat. Permittee shall ensure that all project areas have proper spill clean-up materials (absorbent pads, sealed containers, booms, etc.) to contain the movement of any spilled substances. All debris shall be disposed of properly. BMPs shall be employed to accomplish these requirements. CDFW shall be notified immediately by the Permittee of any spills and shall be consulted regarding cleanup procedures.
- 2.31 Removal of Debris, Materials and Rubbish. Permittee shall remove all project generated debris, building materials and rubbish from the project area following completion of project activities.

Water Diversion

- 2.32 Non-Erodible Materials. Permittee shall use only clean non erodible materials in the construction of any water diversion device. All materials used for diversion of water shall be removed from the stream following completion of instream work each year.

- 2.33 Maintain Water Quality. Permittee shall divert flow in a manner that prevents turbidity, siltation, or pollution and provides flows downstream. Flows downstream shall be provided during all times that the natural flow would have supported aquatic life. When the temporary diversion is being installed, maintained, or placed in operation, flows shall be sufficient quality and quantity, and of appropriate temperature to support fish and other aquatic life both above and below the diversion.
- 2.34 Compliance with Section 5901 of the Fish and Game Code. All water diversion facilities shall be designed, constructed, and maintained so they do not prevent, impede, or tend to prevent or impede the passing of fish upstream or downstream, as required by Section 5901 of the Fish and Game Code. This includes, but is not limited to, maintaining, or providing a supply of water at an appropriate depth and velocity to facilitate upstream and downstream migration of juvenile and adult salmonids.
- 2.35 General Compliance with Screening Requirement. Notwithstanding Section 6027 of the Fish and Game Code, fish screens shall be in place and maintained in working order at all times water is being diverted. If aquatic species are observed in the stream during diversion activities, the screened intake hose shall be placed inside a bucket to prevent impingement of species.
- 2.36 Screen and Bypass Channel Maintenance. The Permittee shall regularly inspect all fish screens and intake pipes to verify that they are effectively protecting salmonids and other fish species. When necessary, the Permittee shall clean and repair all fish screens and intake pipes. If a fish screen is removed for cleaning or repair, the Permittee shall ensure either that a replacement screen is installed immediately, the diversion is not in operation, or water is not flowing through the area where the screen is removed. Fish screens shall be in place and maintained in working order at all times while water is being diverted.
- 2.37 Maximum Diversion Rate. As stated by the Permittee, the maximum instantaneous rate of withdrawal at the point of diversion shall be limited to four-point-twenty-two (4.22) cubic feet per second.
- 2.38 Intake Closure at End of Seasonal Operations. At the end of drafting operations each season, temporary intakes shall be removed from the stream, plugged, capped, or blocked, using a shut-off valve.
- 2.39 Authorization Limited to Intake Installation or Maintenance. This Agreement does not authorize the construction of any temporary or permanent dam, structure, flow restriction, or the placement or excavation, of any material into the active channel other than a screened intake.
- 2.40 Limitations on Authorization of Water Use. This Agreement does not authorize any diversion, use, or storage of water unless already permitted by law. Permittee is responsible for obtaining all necessary water rights and maintaining compliance

with the State Water Code and Title 23 California Code of Regulations as appropriate. Permittee shall store and use water in accordance with a valid water right, including any limitations on when water may be stored and used, the purpose for which it may be stored and used, and the location(s) where water may be stored and used. Information regarding water right registrations can be found at https://www.waterboards.ca.gov/waterrights/water_issues/programs/registrations. Information about water right permits and applications can be found here: https://www.waterboards.ca.gov/waterrights/water_issues/programs/applications.

3. Reporting Measures

Permittee shall meet each reporting requirement described below.

- 3.1 Notification of Project Initiation. The Permittee shall notify the CDFW two (2) business days prior to beginning work for each construction season. Notification shall be submitted as instructed in Contact Information section below. Email submittal is preferred.
- 3.2 Notification of Project Completion. Upon completion of the project activities described in this Agreement, the project activities shall be photographed. Photographs shall be submitted to CDFW within fifteen (15) business days of project completion. Photographs and project completion notification shall be submitted as instructed in Contact Information section below. Email submittal is preferred.
- 3.3 Notification to the California Natural Diversity Database. If any special-status species are observed during project implementation, the Permittee shall submit the California Natural Diversity Data Base (CNDDDB) Online Field Survey Form electronically at <https://www.wildlife.ca.gov/data/CNDDDB/submitting-data> within five (5) business days of the sightings, and provide a copy of the form, survey map and/or report to the CDFW's Regional office as instructed in Contact Information section below.

CONTACT INFORMATION

Any communication that Permittee or CDFW submits to the other shall be in writing and any communication or documentation shall be delivered to the address below by U.S. mail, fax, or email, or to such other address as Permittee or CDFW specifies by written notice to the other.

LIABILITY

Permittee shall be solely liable for any violations of this Agreement, whether committed by Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents or contractors and subcontractors, to complete the project or any activity related to it that this Agreement authorizes.

This Agreement does not constitute CDFW's endorsement of, or require Permittee to proceed with the project. The decision to proceed with the project is Permittee's alone.

SUSPENSION AND REVOCATION

CDFW may suspend or revoke in its entirety this Agreement if it determines that Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, is not in compliance with this Agreement.

Before CDFW suspends or revokes this Agreement, it shall provide Permittee written notice by certified or registered mail that it intends to suspend or revoke. The notice shall state the reason(s) for the proposed suspension or revocation, provide Permittee an opportunity to correct any deficiency before CDFW suspends or revokes this Agreement, and include instructions to Permittee, if necessary, including but not limited to a directive to immediately cease the specific activity or activities that caused CDFW to issue the notice.

ENFORCEMENT

Nothing in this Agreement precludes CDFW from pursuing an enforcement action against Permittee instead of, or in addition to, suspending or revoking this Agreement.

Nothing in this Agreement limits or otherwise affects CDFW's enforcement authority or that of its enforcement personnel.

OTHER LEGAL OBLIGATIONS

This Agreement does not relieve Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, from complying with, from obtaining any other permits or authorizations that might be required under, other federal, state, or local laws or regulations before beginning the project or an activity related to it. For example, if the project causes take of a species listed as threatened or endangered under the Endangered Species Act (ESA), such take will be unlawful under the ESA absent a permit or other form of authorization from the U.S. Fish and Wildlife Service or National Marine Fisheries Service.

This Agreement does not relieve Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, from complying with other applicable statutes in the Fish and Game Code including, but not limited to, Fish and Game Code sections 2050 *et seq.* (threatened and endangered species), section 3503 (bird nests and eggs), section 3503.5 (birds of prey), section 5650 (water pollution), section 5652 (refuse disposal into water), section 5901 (fish passage), section 5937 (sufficient water for fish), and section 5948 (obstruction of stream).

Nothing in this Agreement authorizes Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, to trespass.

AMENDMENT

CDFW may amend this Agreement at any time during its term if CDFW determines the amendment is necessary to protect an existing fish or wildlife resource.

Permittee may amend this Agreement at any time during its term, provided the amendment is mutually agreed to in writing by CDFW and Permittee. To request an amendment, Permittee shall submit to CDFW a completed CDFW "Request to Amend Lake or Streambed Alteration" form and include with the completed form payment of the corresponding amendment fee identified in CDFW's current fee schedule (see Cal. Code Regs., tit. 14, § 699.5).

TRANSFER AND ASSIGNMENT

This Agreement may not be transferred or assigned to another entity, and any purported transfer or assignment of this Agreement to another entity shall not be valid or effective, unless the transfer or assignment is requested by Permittee in writing, as specified below, and thereafter CDFW approves the transfer or assignment in writing.

The transfer or assignment of this Agreement to another entity shall constitute a minor amendment, and therefore to request a transfer or assignment, Permittee shall submit to CDFW a completed CDFW "Request to Amend Lake or Streambed Alteration" form and include with the completed form payment of the minor amendment fee identified in CDFW's current fee schedule (see Cal. Code Regs., tit. 14, § 699.5).

EXTENSIONS

In accordance with Fish and Game Code section 1605, subdivision (b), Permittee may request one extension of this Agreement, provided the request is made prior to the expiration of this Agreement's term. To request an extension, Permittee shall submit to CDFW a completed CDFW "Request to Extend Lake or Streambed Alteration" form and include with the completed form payment of the extension fee identified in CDFW's current fee schedule (see Cal. Code Regs., tit. 14, § 699.5). CDFW shall process the extension request in accordance with Fish and Game Code section 1605, subdivisions (b) through (e).

If Permittee fails to submit a request to extend this Agreement prior to its expiration, Permittee must submit a new notification and notification fee before beginning or continuing the project this Agreement covers (Fish & G. Code § 1605, subd. (f)).

EFFECTIVE DATE

This Agreement becomes effective on the date of CDFW's signature, which shall be: 1) after Permittee's signature; 2) after CDFW complies with all applicable requirements under the California Environmental Quality Act (CEQA); and 3) after payment of the applicable Fish and Game Code section 711.4 filing fee listed at <https://www.wildlife.ca.gov/Conservation/CEQA/Fees>.

TERM

This Agreement shall **expire five (5) years** from the date signed by CDFW. All provisions in this Agreement shall remain in force throughout its term. Permittee shall remain responsible for implementing any provisions specified herein to protect fish and wildlife resources after this Agreement expires or is terminated, as Fish and Game Code section 1605, subdivision (a)(2) requires.

EXHIBITS

The documents listed below are included as exhibits to this Agreement and incorporated herein by reference.

AUTHORITY

If the person signing this Agreement (signatory) is doing so as a representative of Permittee, the signatory hereby acknowledges that he or she is doing so on Permittee's behalf and represents and warrants that he or she has the authority to legally bind Permittee to the provisions herein.

AUTHORIZATION

This Agreement authorizes only the project described herein. If Permittee begins or completes a project different from the project this Agreement authorizes, Permittee may be subject to civil or criminal prosecution for failing to notify CDFW in accordance with Fish and Game Code section 1602.

CONCURRENCE

Through the electronic signature by Permittee or Permittee's representative as evidenced by the attached concurrence from CDFW's Environmental Permit Information Management System (EPIMS), Permittee accepts and agrees to comply with all provisions contained herein.

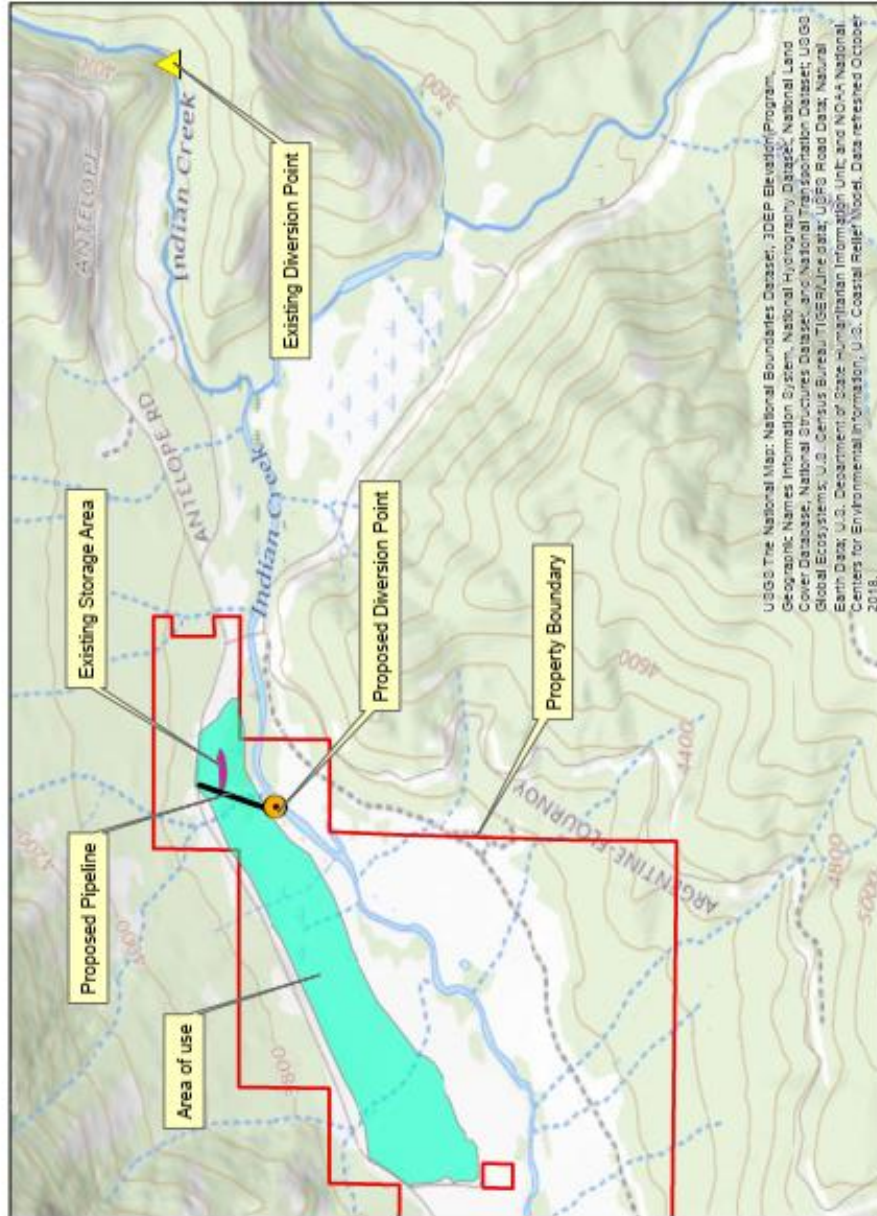

The EPIMS concurrence page containing electronic signatures must be attached to this agreement to be valid.

IN THE MATTER OF THE DETERMINATION OF THE RIGHTS OF VARIOUS CLAIMANTS TO THE WATER OF INDIAN CREEK STREAM SYSTEM IN PLUMAS COUNTY, CALIFORNIA: CASE NO. 4185 (1950)

NOTICE OF PETITION TO AMEND WATER DECREE

Notice is hereby given that on or about TBD, Petitioner and water rights holder pursuant to the Indian Creek Decree (No. 4185) Feather River Land Trust submitted for filing a Petition for Amendment of Decree to Add a Movable Point of Diversion Along Indian Creek with the Superior Court of the State of California, Plumas County.

Said petition seeks to modify water rights to Indian Creek granted to petitioners, successors in interest, in Decree No. 4185, by adding a moveable point of diversion regarding the use of these water rights. Petitioners do not seek any increase in the amounts of water allocated to them by the Decree. A copy of the petition can be viewed [HERE](#).

Any objections to the petition should be filed with the Plumas County Superior Court, and mailed or emailed to petitioners' attorney (Aaron Baker) within 45 days of the date of first publication of this notice. The first date this notice will be published is TBD.

The address of the court is as follows:

Project Description

FRLT is working to add a movable point of water diversion at our Heart K Ranch in Genesee Valley.

Heart K Ranch has an existing water right (Diversion Point 36-Robinson) as described in the Indian Creek Decree (Decree), with the diversion point located approximately three miles upstream of the Heart K Ranch on Indian Creek. FRLT is seeking to create a new point of diversion (POD) for the Heart K Ranch that will allow us to use our decreed water in a more efficient manner, to enhance the condition of our meadows, improve forage, and reduce areas of bare soil and yellow star thistle currently found on the Ranch.

Feather River Land Trust (FRLT) acquired the 903-acre Heart K Ranch in Genesee Valley in 2006 to conserve its unique cultural, historic, and ecological values. The property is a working cattle ranch and is managed for improved meadow conditions, water quality, wildlife habitat, livestock grazing, and public access, and education. We plan to use a portable water pump, equipped with an accurate flow measurement device to draw water from Indian Creek within the boundaries of the Heart K Ranch. FRLT's water use will not exceed the amount provided pursuant to the Indian Creek Decree, and the use will be monitored by the Indian Creek Watermaster.

[Name]

[Address]

[City, State, Zip]

Dear [Name]:

I am writing to inform you of Feather River Land Trust's (FRLT) plan to add a water diversion point at our Heart K Ranch in Genesee Valley. FRLT purchased the Heart K Ranch in 2006 to conserve its unique cultural, historic, and ecological values. The property is a working cattle ranch and is managed for improved grazing, water quality, wildlife habitat, and public education.

Heart K Ranch has an existing water right (Diversion Point 36-Robinson) as described in the Indian Valley Decree (decree), with the diversion point located approximately three miles upstream of the Heart K on Indian Creek, on national forest lands (see attached Map). FRLT is seeking to create a new point of diversion (POD) for the Heart K Ranch that will allow us to make better use of our decreed water rights. We plan to use a portable water pump to divert water from Indian Creek within the boundaries of the Heart K Ranch. FRLT will be requesting this change of POD with the Superior Court of the State of California (Plumas County) to better facilitate the use of our water rights to enhance the condition of our meadows, improve forage, and reduce areas of bare soil and yellow star thistle currently found on the Ranch.

The change in POD will not increase the amount of FRLT's existing water right allotment as defined in the decree. It is simply a change in where the water will be taken from the creek. The change is nearly identical to the change that Gonzalo Gonzalez obtained in 2004, when he moved his point of diversion from the same upstream Heart K diversion point noted above, to a portable water pump on his land. Like Mr. Gonzalez, FRLT will work with the Indian Valley Watermaster to petition the court to amend the decree by adding the new point of diversion. FRLT will then follow court procedures, including providing formal notice of the request to other decreed water right holders and will respond to questions and comments.

We are sharing our plans to address any questions that this project may raise with our downstream neighbors. FRLT has been working to make many improvements on Heart K Ranch since it was purchased, including installing livestock water troughs away from the creek, fencing upgrades, and other projects to make the ranch a more functional working landscape. This additional diversion point will help us to keep making progress toward our long-term goals for Heart K.

Please contact Nils Lunder, FRLT's North Region Manager, at nlunder@frlt.org or by phone at (530)283-5758, ext 6 for more information or if you have any questions, or comments.

Sincerely,

Shelton Douthit

Superior Court

State Of California
Case No. : 4185

In Re.: PETITION FOR AMENDMENT OF DECREE TO ADD A
MOVABLE POINT OF DIVERSION ALONG INDIAN CREEK

This report is proffered to the Court in response to Ex Parte Order dated January 23, 2004. Said Ex Parte Order appoints the watermaster to investigate a proposed movable point of diversion along Indian Creek, and to receive and evaluate any objections to the subject petition. The Court has further ordered the watermaster to prepare a written report of the investigation and summarize any objections and advise the Court which objections are, in the opinion of the watermaster, without merit, and whether any objections can be conditionally resolved. The Ex Parte Order further orders the watermaster to determine whether the proposed modifications stated in the Petition will injure any legal water user or affect fish and wildlife habitat.

OBJECTIONS TO THE PETITION

The watermaster received by regular mail an initial set of objections dated February 25, 2004, and an additional set of objections dated March 11, 2004 from the same parties, Tom and Terry Bengard. Thereafter, on April 5, 2004, the watermaster received by regular mail a Notice Of The

Respondents' Withdrawal Of Objections And Motions to
Petitioners' Petition.

The Bengards' objections being so withdrawn, and no other objections having been served upon the watermaster or having been filed with the Court, leave the record clear of any outstanding objections to Petitioners' proposal to establish a movable point of diversion, and amendment to Decree No. 4185.

INJURY-RELATED CONSIDERATIONS

Decree No. 4185 (Decree) establishes a framework of rights to water from Indian Creek stream system. The Decree sets forth the following dictates: season (in general March 1 through October 31), place (Schedule One of Decree) and purpose of use, and quantity and priority of water rights (Schedule 6 of Decree), and point(s) of diversion (Schedule 2 of Decree).

The Petitioners' proposal add a point of diversion in order to pump water from Indian Creek, will not alter the adjudicated season, place, or the purpose of use, nor will it change the quantity and priorities of Petitioners' rights.

A MOVABLE POINT OF DIVERSION CURRENTLY EXISTS

The concept of implementing a movable point of diversion is not without precedent. SWRCB License No. 9165 establishes

boundaries within which a "movable point of rediversion" can be used to divert "stored" water conveyed in Indian Creek on to land immediately upstream from Petitioners' land. This arrangement provides an option to either utilize Diversion No. 36 or pump water from Indian Creek within the boundaries specified in SWRCB License No. 9165. Two hundred acre-feet of water rights originally authorized by this SWRCB license, were incorporated into the Decree (Paragragph 48), and no longer exist under authority of SWRCB. Petitioners seek to establish a similar option on their land that extends to their entire water right.

FISH AND WILDLIFE CONSIDERATIONS

The impact that the Petitioners' proposal may have upon fish and wildlife habitat are beyond both the expertise and statutory authority of the watermaster to address. However, Petitioners have been advised to comply with California Department of Fish and Game Code Section 1601 and other applicable statutes. Otherwise, this report is narrowly confined to water right injury-related issues only, and shall make no attempt to broaden into areas that may be of concern to other agencies or interests. California The Department of Fish and Game (DFG) is the lead State agency with respect to the environmental issues concerning this action. Petitioners have made representation to this Court

that DFG is a party listed on the "Service List" attached to the original Petition, and through such reference, Petitioners claim to have properly notified DFG of their intent. The office of the watermaster has not received any objections to the Petition from DFG.

Recommendations to the Court

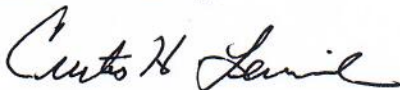

In order to maintain and protect Indian Creek stream system water rights, and establish accountability that Petitioners proposal will be in conformance with terms and conditions of the Decree, it is respectfully suggested that any Order of Court issued should contain the following conditions: Petitioners shall obtain all applicable California Department of Fish and Game permits; Pump and associated piping must be sized not to exceed twice the total water right; Discharge butterfly valve must be installed to regulate the quantity of water pumped to effectively limit same to the existing priority water right; Pump inlet suction must be screened to minimize uptake of fish; Meter should be of propeller driven type (Water Specialties Model ML-20 or equivalent) and installed according to manufacturers specifications for flow conditioning and accuracy; Pump output must be mechanically metered in a manner that will provide both instantaneous cubic feet per second and totalized acre-feet readouts; calibration of

said meter must be done on a regular and periodic basis according to manufacturer specifications; Boundaries within which pumping operations from Indian Creek can take place shall be between the point farthest upstream and immediately adjacent to Petitioners' property, and extend to a point approximately one thousand feet downstream; said boundaries must be finally established by legal descriptions within one year or less time, after Petitioners' and watermaster have determined most beneficial locations during upcoming irrigation season.

CONCLUSION

By virtue of the fact that Petitioners' proposal will not amend previously adjudicated season, place or purpose of use, or quantity and priorities of water rights, it is the conclusion of the Watermaster that no injury will occur to any legal water right holder within the Indian Creek stream system, provided that the above recommendations are required by Order of Court.
